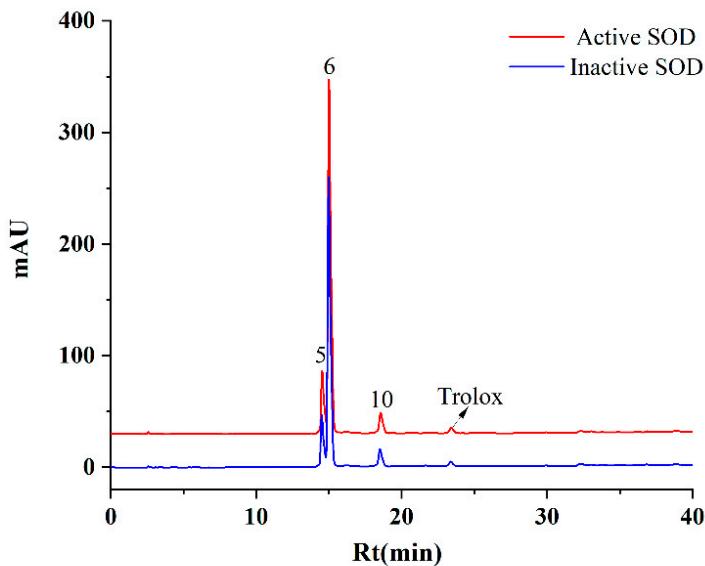

Figure S1. The UF-LC-UV chromatograms of the potential ligands of superoxide dismutase (SOD) at 280 nm. The red and blue line represent activated and inactivated SOD, respectively. (5, *N-trans-p*-coumaroyloctopamine; 6, *N-trans*-feruloyloctopamine; 10, *N-trans*-feruloyltyramine).

Table S1. The relative binding degree (BD) and the relative IC₅₀ data of potential SOD ligands in *P. sibiricum*.

NO.	Compound	BD (%)	Relative IC ₅₀ (mM)
5	<i>N-trans-p</i> -coumaroyloctopamine	19.10	2.06
6	<i>N-trans</i> -feruloyloctopamine	21.70	1.81
10	<i>N-trans</i> -feruloyltyramine	25.80	1.52
-	Trolox	13.98	2.82

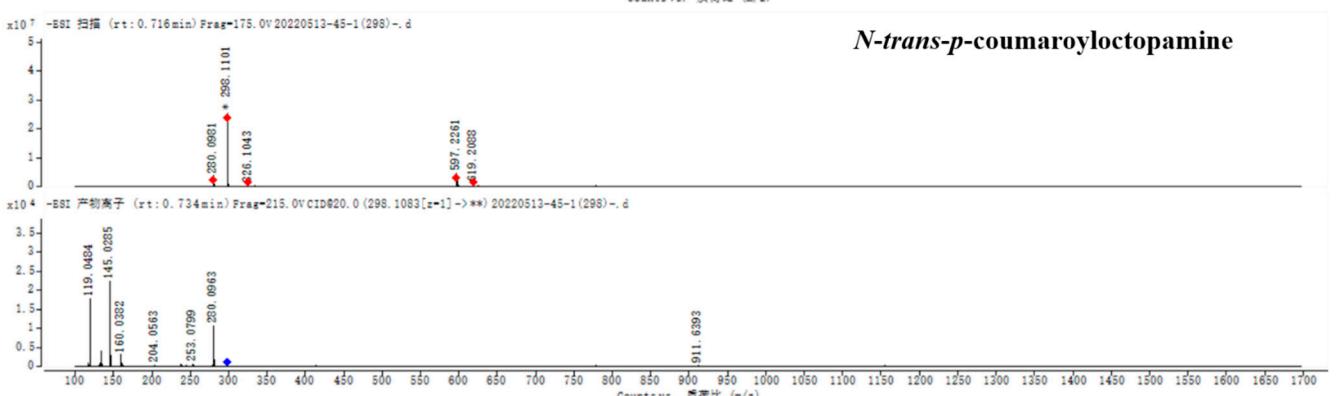

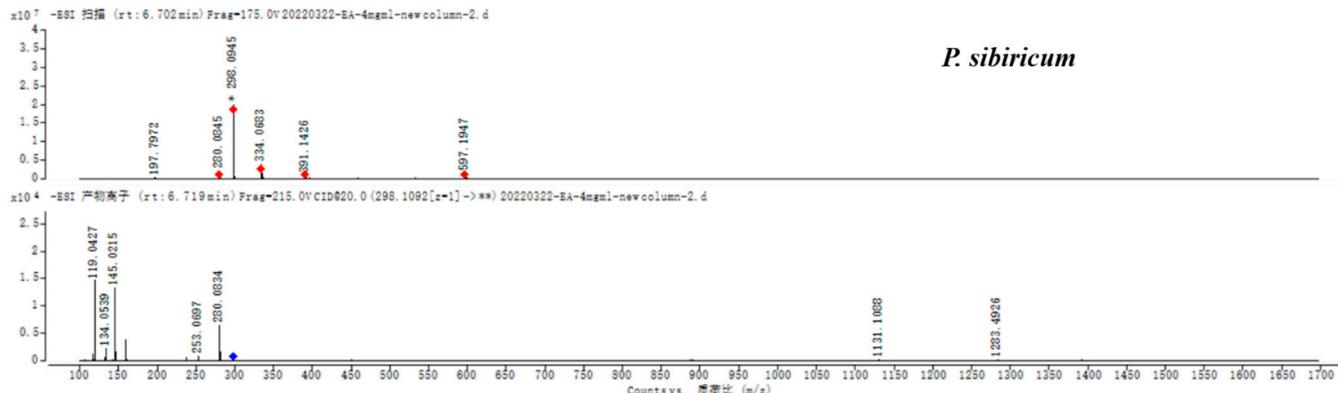

Figure S2. The mass spectrometry fragments of *N-trans-p-coumaroyloctopamine* in standard substance and *P. sibiricum*.

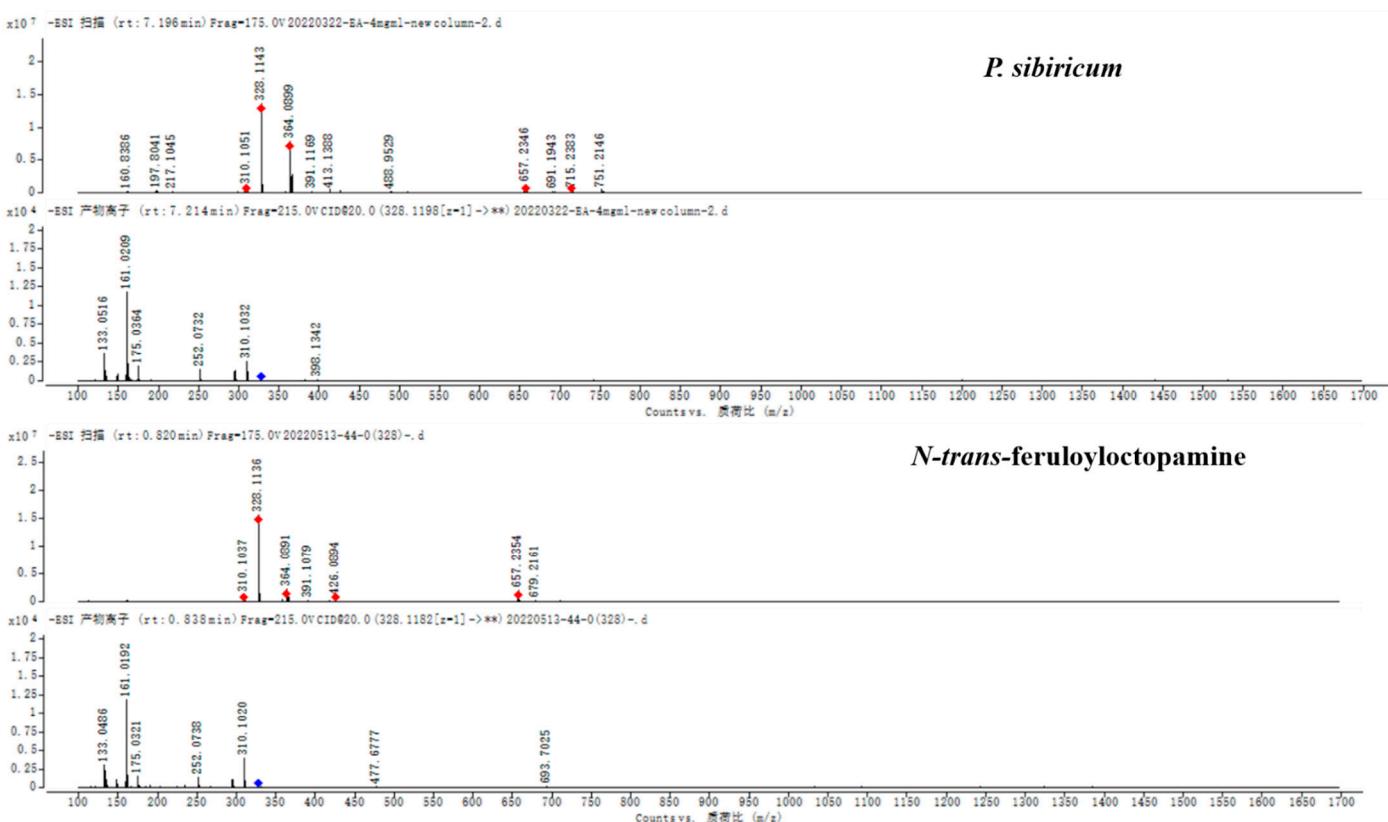

Figure S3. The mass spectrometry fragments of *N-trans-feruloyloctopamine* in standard substance and *P. sibiricum*.

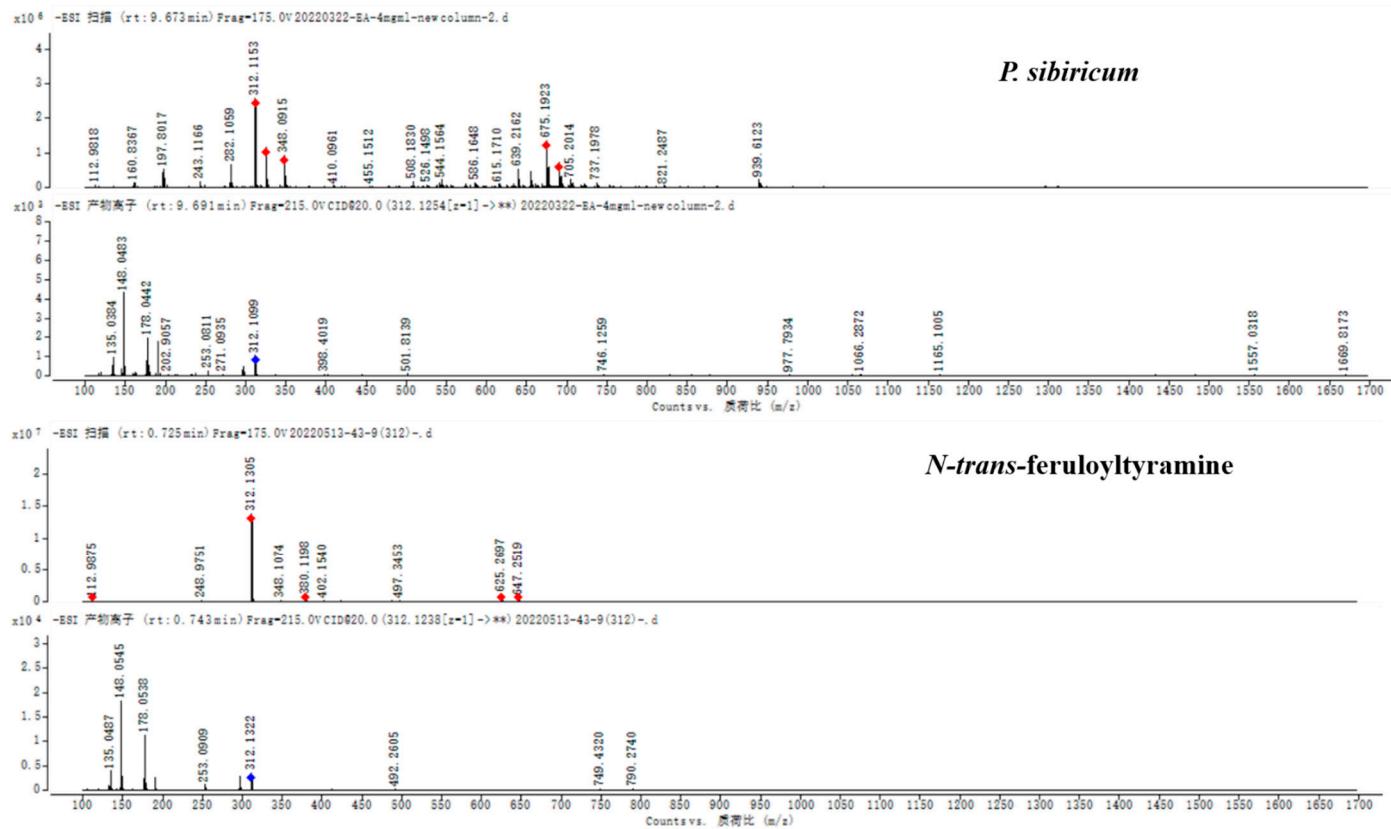

Figure S4. The mass spectrometry fragments of *N-trans-feruloyltyramine* in standard substance and *P. sibiricum*.

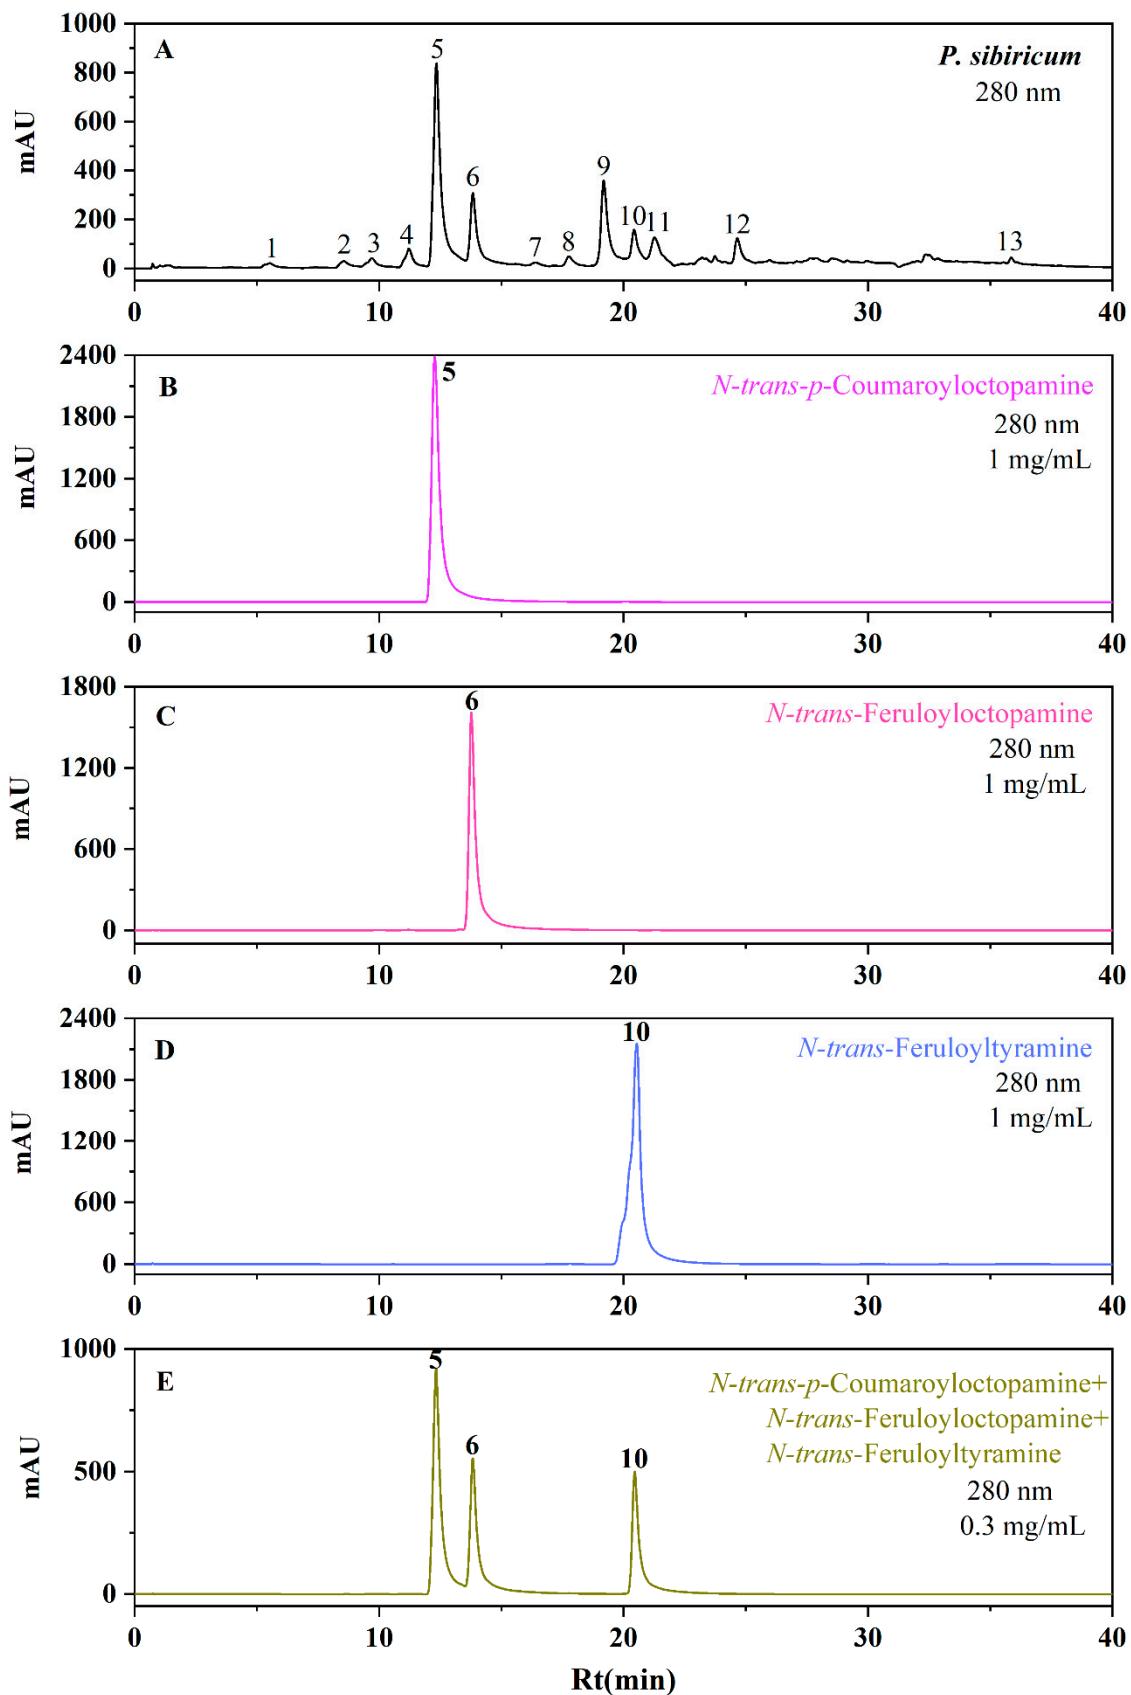

Figure S5. The UPLC of the potential ligands' standards to SOD. A: *P. sibiricum*; B: *N-trans-p-coumaroyloctopamine*; C: *N-trans-feruloyloctopamine*; D: *N-trans-feruloyltyramine*; E: *N-trans-p-coumaroyloctopamine + N-trans-feruloyloctopamine + N-trans-feruloyltyramine*.
