Table S1. Studied plant presentation

***Calophyllum inophyllum* L.**

Family: Calophyllaceae

Vernacular name: Tamanu

Biogeographic status: Polynesian introduction

Parts used: Leaves and fruits (nuts)

Botanical description: Evergreen tree of 5-12 m in height. Bark gray brown exuding pellucid resins when wounded. Broadly elliptic green leaf, shiny on both surfaces. White scented flowers. Green globose drupes, yellow when mature fruit (2.5 cm in diam).

***Gardenia taitensis* DC.**

Family: Rubiaceae

Vernacular name: Tiare

Biogeographic status: Polynesian introduction

Parts used: Flowers

Botanical description: Evergreen shrub or small tree (1-6 m tall). Glossy dark green opposite leaves (5-16 cm long). Creamy white fragrant flowers, pinwheel-shaped with 5 to 9 lobes (4 cm long). Ellipsoidal fruits within numerous seeds in orange pulp at maturity.

***Curcuma longa* L.**

Family: Zingiberaceae

Vernacular name: Rea

Biogeographic status: Polynesian introduction

Parts used: Rhizomes

Botanical description: Herbaceous plants of 1 m. Alternate blade green leaves (76-115 cm long). Aromatic orange-yellow cylindrical rhizomes composed by many branched. Light purple and white to green inflorescence and flowers with bright-yellow corolla tube producing small brown sterile seeds.

***Cordia subcordata* Lam.**

Family: Boraginaceae

Vernacular name: Tou

Biogeographic status: Indigenous

Parts used: Leaves

Botanical description: Evergreen tree of 7-15 m with yellow-brown bark, growing in coastal area. Ovate alternate leaves, light green, shiny above and dull below. Flowers with orange corolla in funnel-shaped wide at the throat (2.5-4 cm). Round fruits (2-3 cm in diam), hard and woody when mature.

***Ficus prolixa* G.Forst.**

Family: Moraceae

Vernacular name: Ora

Biogeographic status: Indigenous

Parts used: Aerial roots

Botanical description: Large banyan tree (up to 30 m tall), much-branched. Ovate alternate dark green leaves (16 x 6.5 cm). Filiform aerial roots forming thick roots when reach the ground. Subsessile inflorescence and monoecious flowers. Little round fig white to purple when mature.

Table S2. MZmine parameters

Module	Parameters
Raw data methods > Raw data import	Importation of all .mzXML files
Raw data methods > Mass detection	Scans MS level : 1 Mass detector : centroid Noise level : 2.0E3
Raw data methods > Mass detection	Scans MS level : 2 Mass detector : centroid Noise level : 1.5E2
Feature detection > LC-MS > ADAP chromatogram builder	Scans MS level : 1 Min group group size in # of scans : 3 Group intensity threshold : 2.0E3 Min highest intensity : 2.0E2 Scan to scan accuracy (m/z) : 10 ppm
Feature detection > Smoothing	Smoothing algorithm: Loess smoothing
Feature detection > Chromatogram resolving > Local minimum resolver	Chromatographic threshold : 90% Minimum search range RT/Mobility: 0.10 (POS); 0.01 (NEG) Minimum relative height : 15% (POS); 1% (NEG) Minimum absolute height : 1.0E3 Min ratio of peak top/edge : 1.6 Peak duration range (min/mobility) : 0.01-2.3 (POS); 0.01-2.4 (NEG) Min # of data points : 3
Feature list methods > Isotopes > 13C isotope filter	m/z tolerance : 10 ppm Retention time tolerance : 0.1 absolute (min) Mobility tolerance : unchecked Monotonic shape : unchecked Maximum charge : 2 Representative isotope : most intense Never remove feature with MS2 : checked
Feature list methods > Alignment > Join aligner	m/z tolerance : 10 ppm Weight for m/z : 75 Retention time tolerance : 0.2 absolute (min) Weight for RT : 25 Mobility tolerance : unchecked Mobility weight : 1.00 Require same charge state : checked Require same ID : unchecked Compare isotope pattern : unchecked Compare spectra similarity : unchecked
Feature list methods > Processing > Assign MS ² to features	Retention time tolerance : 0.1 absolute (min) MS1 to MS2 precursor tolerance (m/z) : 10 ppm Limit by RT edges : unchecked Combine MS/MS spectra (TIMS) : unchecked Lock to feature mobility range : unchecked Minimum merged intensity : unchecked
Feature list methods > Feature list filtering > Feature list rows filter	Retention time : 0.6 - 30.0 min (auto range) Features with MS2 scans : checked
Feature list methods > Feature list filtering > Feature list blank subtraction	Minimum # of detection in blanks : 1 Fold change increase : unchecked

Figure S1. On-Line RP HPLC DPPH assay chromatogram profiles of inactive extract.

Figure S2. Molecular Network cluster created with GNPS using spectral data of crude extracts in negative mode (self-loop nodes removed).

Node colors represent repartition in plant extracts: *C. inophyllum* leaves (dark green), *C. inophyllum* nuts (light green), *F. prolixa* (purple), *C. subcordata* (blue), *G. taitensis* (pink), *C. longa* (orange).
