

Supplementary Materials:

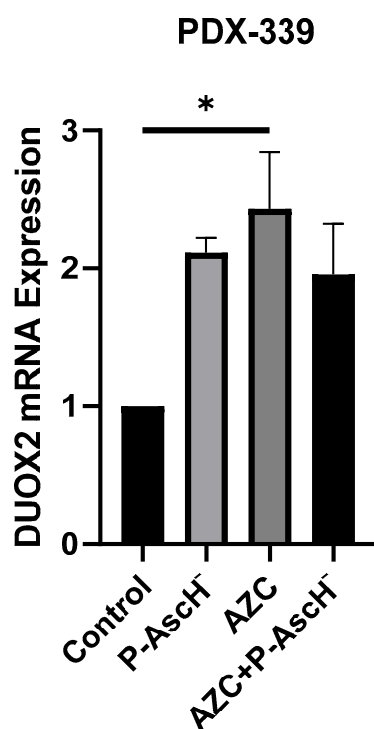

Figure S1. DUOX2 mRNA expression is increased after exposure to AZC (2 μ M) for 5 days and/or P-AsCH⁻ (20 pmol/cell) for 1 hour in PDX-339 cells. The combination of AZC and P-AsCH⁻ produces a similar increase in mRNA expression as AZC or P-AsCH⁻ alone (means \pm SEM, values normalized to control; $n = 6$; * $p < 0.05$ vs. control).
