Supplementary Material

<i>Table of contents</i>	<i>Page</i>
Figure S1. Thermograms of HNT, HNT/AH ₂ and HNT + AH ₂ mixtures in air	2
Table S1. Release of ascorbic acid (AH ₂) from HNT/AH ₂ in acetonitrile at 298 K	2
Table S2. Release of ascorbic acid (AH ₂) from HNT/AH ₂ in buffered water at 298 K	2
Table S3. Summary of AH ₂ release from HNT/AH ₂ .	3
Table S4. Stoichiometric factors for peroxy radical trapping by AH ₂ and HNT/AH ₂	3
Figure S2. Spectrophotometric analysis of AH ₂ release from HNT/AH ₂ in acetonitrile	4
Figure S3. Spectrophotometric analysis of AH ₂ release from HNT/AH ₂ in buffered water	5
Figure S4. Ascorbic acid decay in methanol at 25°	6
Figure S5. Ascorbic acid decay in buffered water at 25°	6
Figure S6. Ascorbic acid decay in acetonitrile at 25°	6
Figure S7. UV–vis spectra of DPPH• reacting with AH ₂ and HNT/AH ₂	7
Scheme S1. Reaction of ascorbic acid (AH ₂) with DPPH• radical,	7
References	8

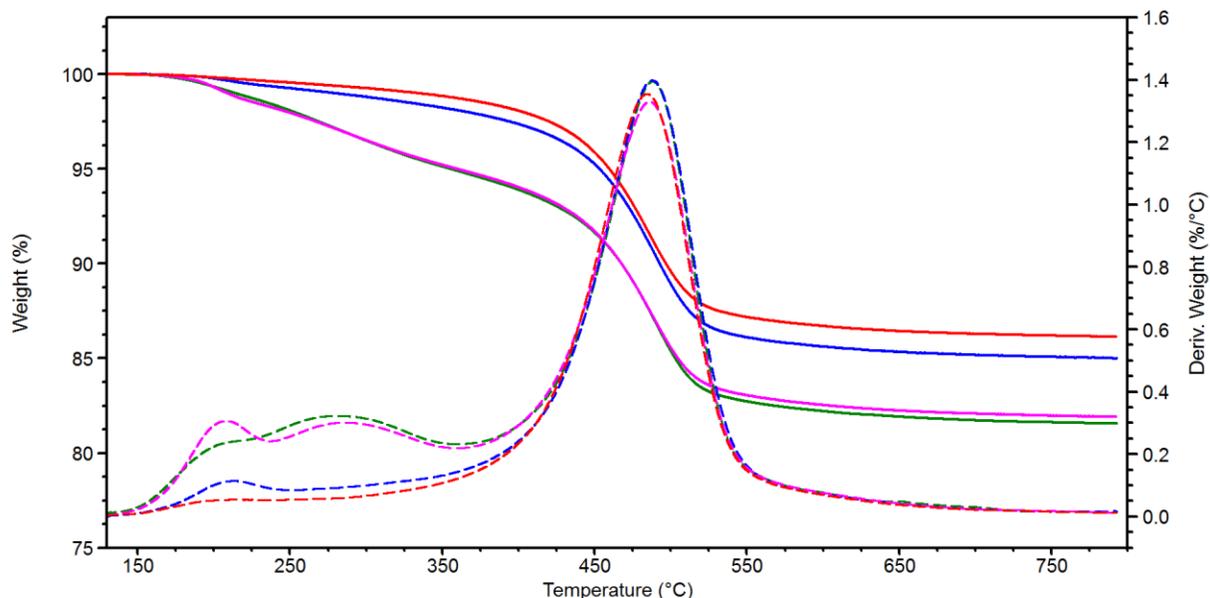

Figure S1. TGA thermograms of HNTs (—), HNT/AH₂ (—), M-1.0: AH₂+HNT (—), M-4.4: AH₂+HNT (—) and their first derivative curves (broken lines) under air atmosphere from 130 up to 800°C. The curves are cleared of the absorbed water contribute.

Table S1. Release of ascorbic acid (AH₂) from HNT/AH₂ expressed as mg in 3 mL of acetonitrile at 298 K (data correspond to experiments in Figure S2)

Entry	HNT/AH ₂ (mg)	Abs.	AH ₂ released (mg)	% AH ₂ ^a
1	1.9	0.2327	0.0444	2.33
2	1.8	0.2159	0.0412	2.29
3	3.2	0.4484	0.0856	2.67
mean ± SD				2.5±0.2

^a % Ascorbic acid released (w/w) from the weighted HNT/AH₂ sample

Table S2. Release of ascorbic acid (AH₂) from HNT/AH₂ expressed as mg in 3 mL of buffered (pH = 7.4) water at 298 K (data correspond to experiments in Figure S3)

Entry	HNT/AH ₂ (mg)	Abs.	AH ₂ released (mg)	% AH ₂ ^a
1	1.0	0.6915	0.0228	2.3
2	1.9	1.4154	0.0460	2.4
3	4.0	2.7029	0.0878	2.2
mean ± SD				2.3±0.1

^a % Ascorbic acid released (w/w) from the weighted HNT/AH₂ sample

Table S3. Summary of AH₂ release (mean \pm SD) after 30 min, versus the amount loaded in HNT/AH₂, in buffered (pH 7.4) aqueous solution and in acetonitrile at 298K. Percentage refer to the weight of ascorbic acid over the weight of composite material HNT/AH₂

Solvent	AH ₂ load in HNT/AH ₂	AH ₂ released (%)
Acetonitrile	4.6 %	2.5 \pm 0.2%
Water (pH 7.4)	4.4 %	2.3 \pm 0.1%

Table S4. Antioxidant activity: number of radicals trapped by each antioxidant molecule, *n*, at different concentration of the antioxidant AH₂ (in parenthesis), measured in inhibited autoxidation experiments at 303 K (mean \pm SD, *N* = 3).

Sample	MeCN ^a	MeCN + 1% water ^a	Buffer pH=7.4 ^b
	<i>n</i>	<i>n</i>	<i>n</i>
HNT	/	/	/
AH ₂	1.0 (1.4x10 ⁻⁵ M)	1.1 (1.4x10 ⁻⁵ M)	0.4 (2.1x10 ⁻⁵ M)
	1.0 (2.5x10 ⁻⁵ M)	0.9 (2.5x10 ⁻⁵ M)	0.2 (4.0x10 ⁻⁵ M)
	0.9 (4.2x10 ⁻⁵ M)	0.9 (3.8x10 ⁻⁵ M)	0.1 (6.0x10 ⁻⁵ M)
	1.2 ^c (7.0x10 ⁻⁶ M)	1.2 ^c (7.0x10 ⁻⁶ M)	0.7 ^c (1.0x10 ⁻⁵ M)
HNT/AH ₂	1.4 (1.4x10 ⁻⁵ M)	1.4 ^d (1.4x10 ⁻⁵ M)	0.8 (2.1x10 ⁻⁵ M)
	1.3 (2.5x10 ⁻⁵ M)	1.3 ^d (2.5x10 ⁻⁵ M)	0.5 (4.0x10 ⁻⁵ M)
	1.2 (4.2x10 ⁻⁵ M)	1.2 ^d (4.2x10 ⁻⁵ M)	0.4 (6.0x10 ⁻⁵ M)

^aExperiment performed with Cumene (1.8 M), AIBN (0.05 M). ^bExperiment performed in Phosphate Buffer 0.1 M pH = 7.4, THF 3.1 M, [AAPH] 25 mM. ^c[HNT] = 0.25 mg/mL. ^dExperiment performed with Styrene (4.3 M), AIBN (0.05 M).

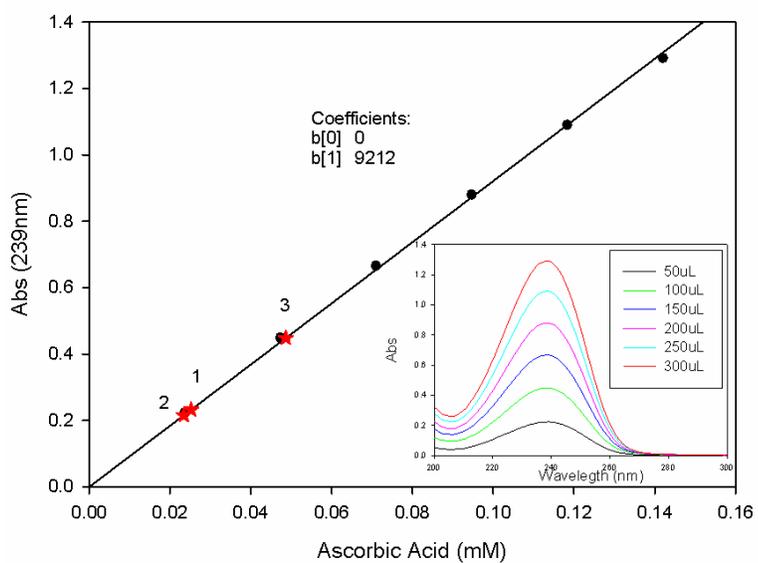

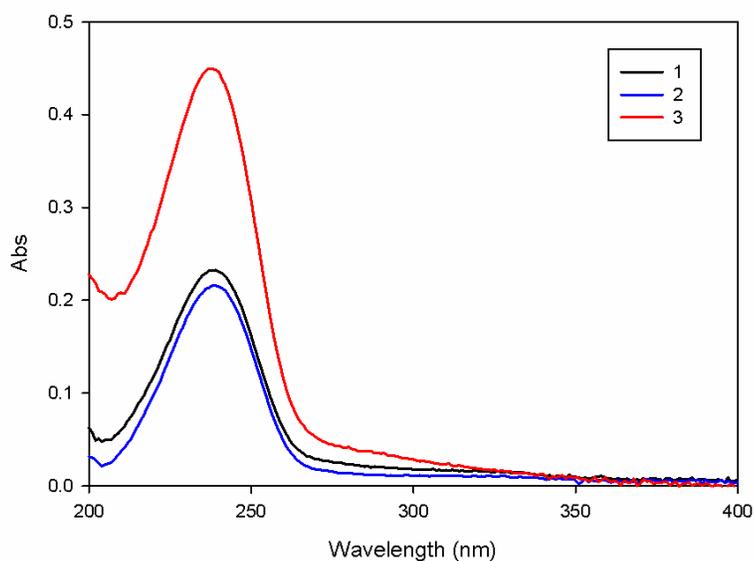

Figure S2. Spectrophotometric analysis of AH₂ release from samples of HNT/AH₂ in 3 mL acetonitrile, sonicated for 1 min., stirred for 24 min. and centrifuged for 5 min. to minimize light scattering due to HNT (top panel). The calibration line (lower panel, black circles) was obtained by addition of different volumes (reported in the insert in μL) of a stock solution of genuine AH₂ 1.42 mM to 3 mL of acetonitrile. In lower panel experiments with HNT/AH₂ samples are shown as red stars. Numbering refers to table S1.

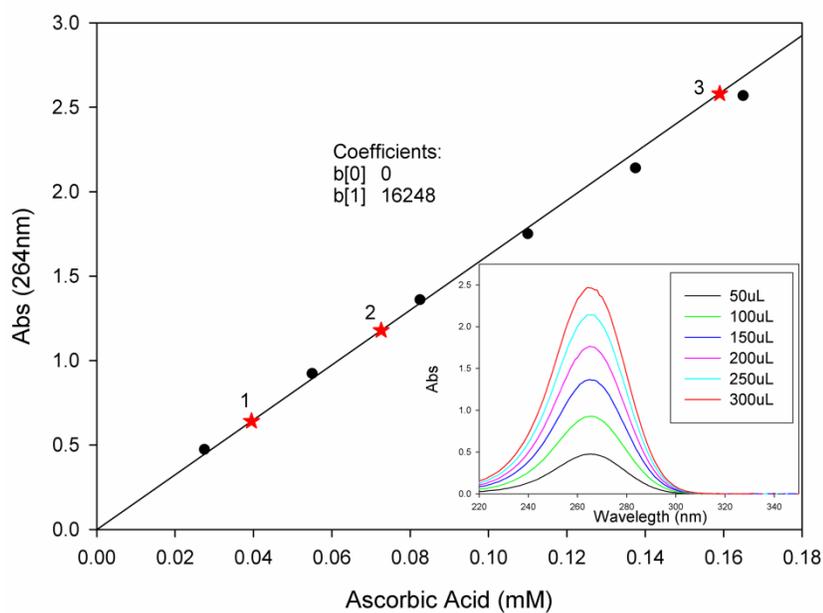

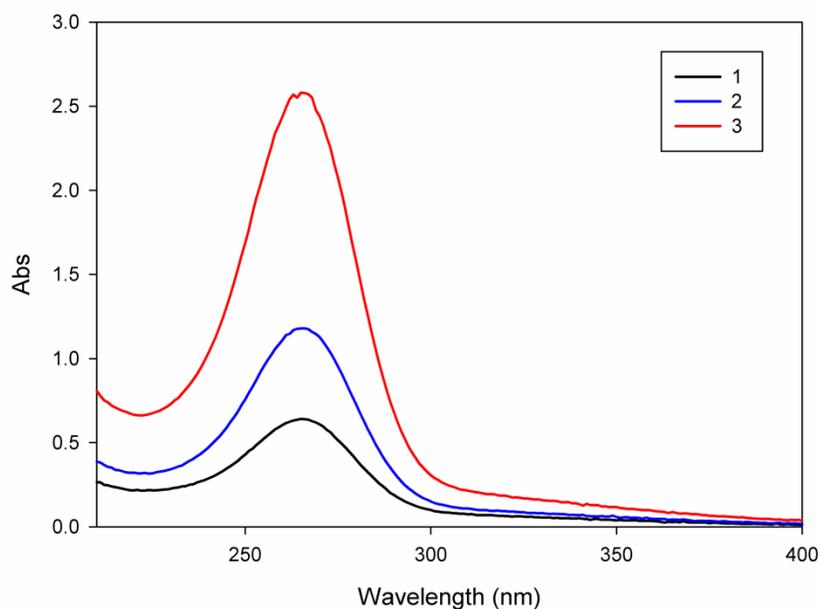

Figure S3. Spectrophotometric analysis of AH₂ release from samples of HNT/AH₂ in 3 mL aqueous buffer (pH = 7.4) sonicated 1 min., stirred 24 min and centrifuged 5 min. to minimize light scattering due to HNT (top panel). The calibration line (lower panel, black circles) was obtained by addition of different volumes (reported in the insert in μL) of a stock solution of genuine AH₂ 1.65 mM to 3 mL of aqueous buffer. In lower panel experiments with HNT/AH₂ samples are shown as red stars. Numbering refers to table S2.

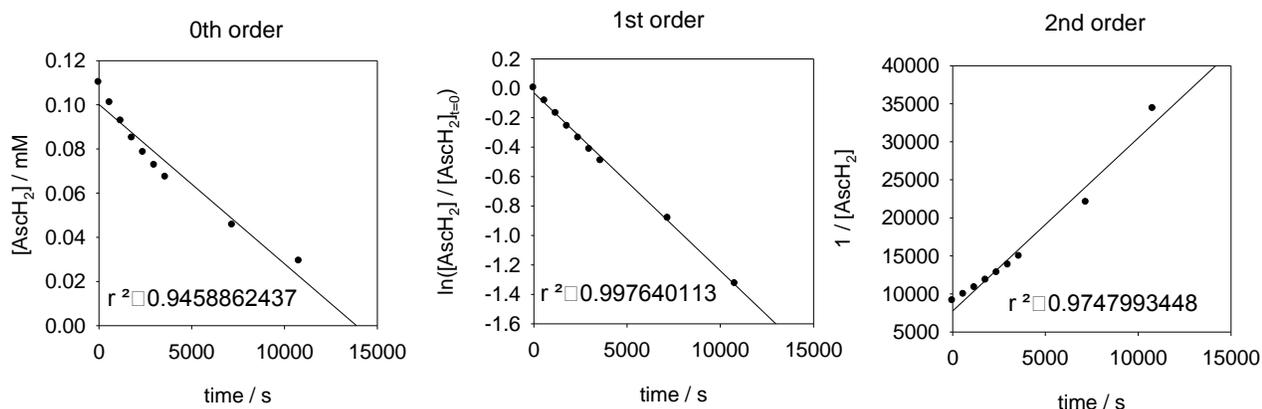

Figure S4. Ascorbic acid decay in methanol at 25°, analyzed to determine the reaction order. The best fit is obtained with the first order data analysis. The first order constant is $1.20 \times 10^{-4} \text{ s}^{-1}$, which corresponds to a second-order rate constant of $0.06 \text{ M}^{-1}\text{s}^{-1}$ considering the solubility of oxygen in methanol (2.0 mM at 25°, 0.2 Atm^1).

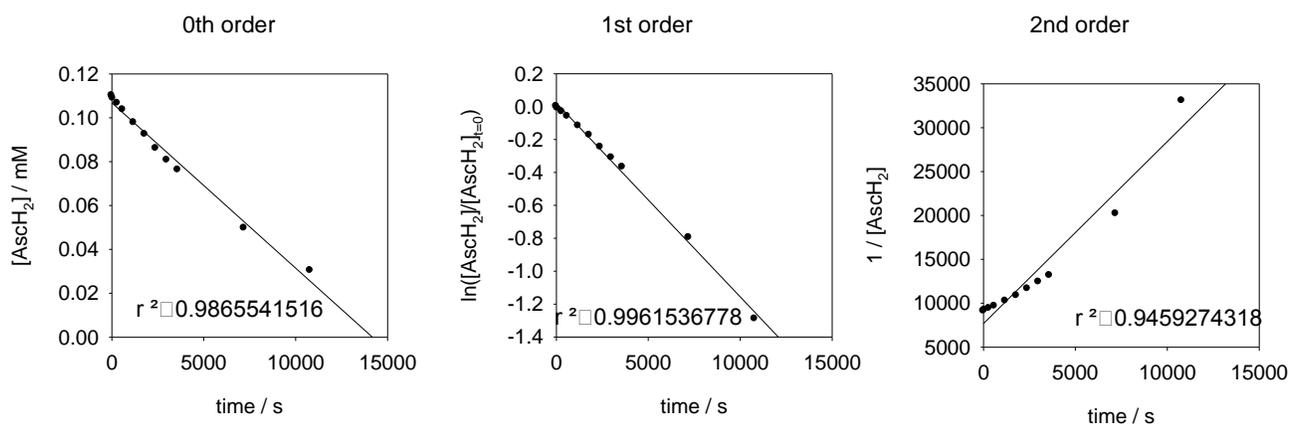

Figure S5. Ascorbic acid decay in water at 25°, analyzed to determine the reaction order. The best fit is obtained with the first order data analysis. The first order constant is $1.18 \times 10^{-4} \text{ s}^{-1}$, which corresponds to a second-order rate constant of $0.56 \text{ M}^{-1}\text{s}^{-1}$ considering the solubility of oxygen in buffered water (0.21 mM at 25°, 0.2 Atm^2).

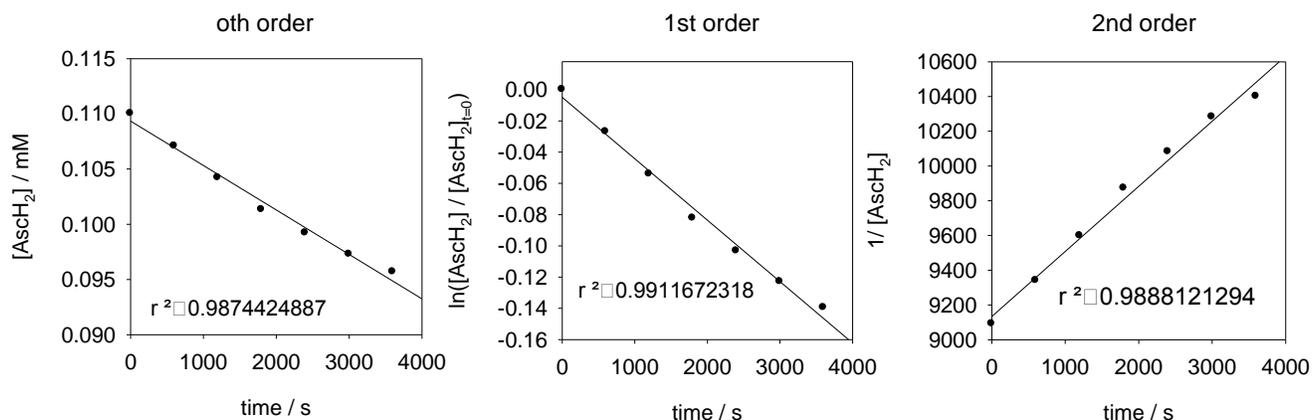

Figure S6. Ascorbic acid decay in acetonitrile at 25°, analyzed to determine the reaction order. The best fit is obtained with the first order data analysis. The first order constant is $3.93 \times 10^{-5} \text{ s}^{-1}$, which corresponds to a second-order rate constant of $0.03 \text{ M}^{-1}\text{s}^{-1}$ considering the solubility of oxygen in acetonitrile (1.3 mM at 25°, 0.2 Atm^3).

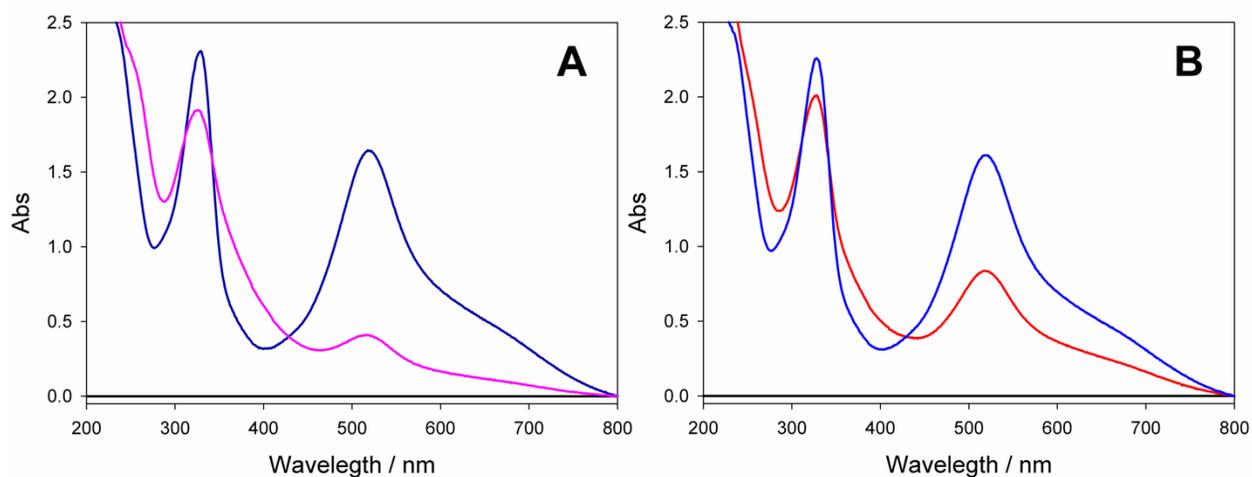

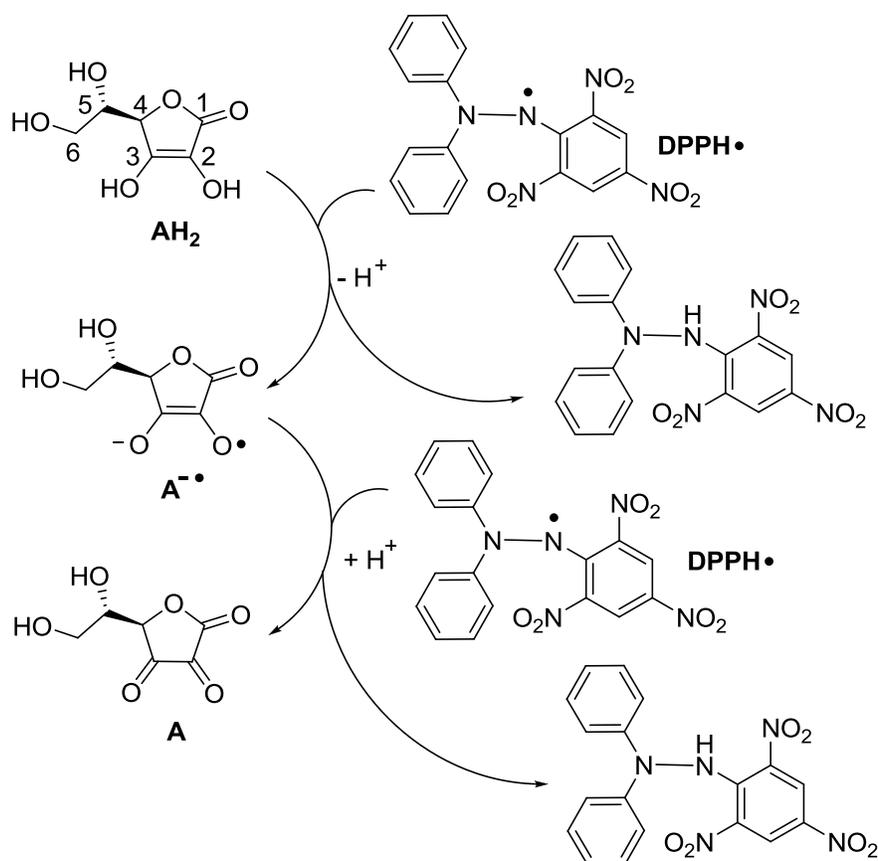

Figure S7. UV-vis (200–800 nm) absorption spectra of: **(A)** DPPH• 143 μM in acetonitrile (dark blue) and after addition of ascorbic acid 57 μM (pink), **(B)** DPPH• 143 μM in acetonitrile (blue) and after addition of HNT/AH₂ 0.29 mg/mL (red).

Scheme S1. Reaction of ascorbic acid (AH₂) with DPPH• radical, explaining the observed stoichiometry.
