

Supplementary Materials: Effect of Melittin on Metabolomic Profiling and Cytokine Production in PMA-Differentiated THP-1 Cells

Abdulmalik Alqarni, Valerie A. Ferro, John A. Parkinson, Mark Dufton and David G. Watson

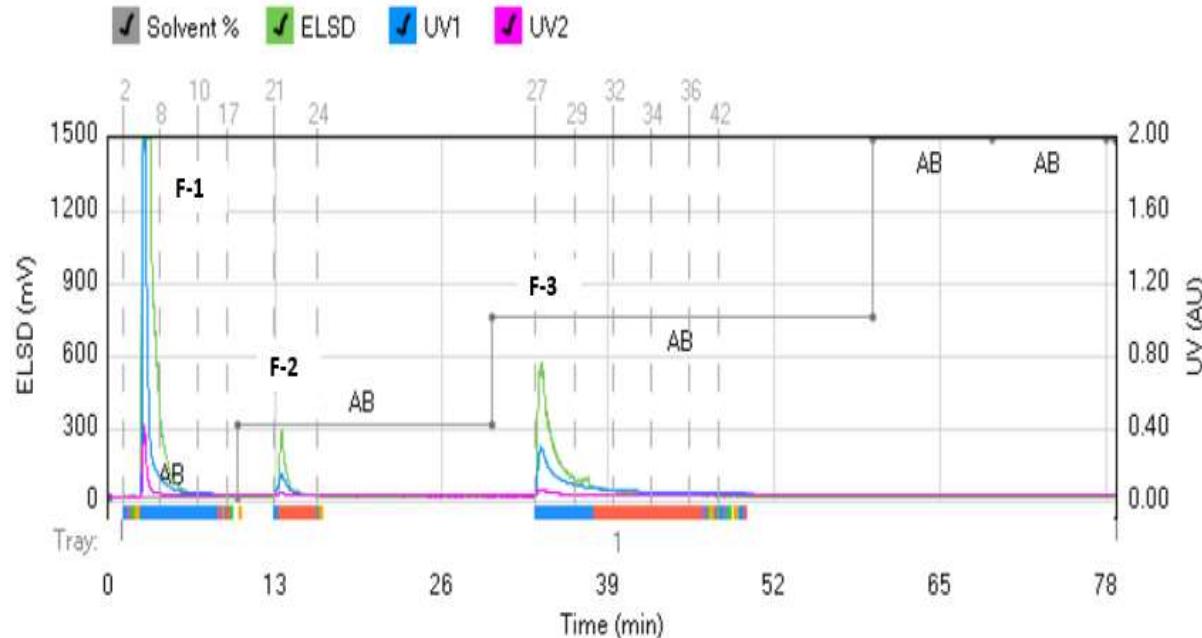

Figure S1: Chromatogram obtained from MPLC for the separation of BV components using the Grace® system. Generic C18, 24g column used; solvents: water (A) and acetonitrile (B) with a gradient of 0-10 min (0% B), 10-20 min (20% B), 20-30 min (50% B), 30-60 min (60% B), 60-70 min (100% B). The colours on the x-axis represent separate collections across with of the peak.

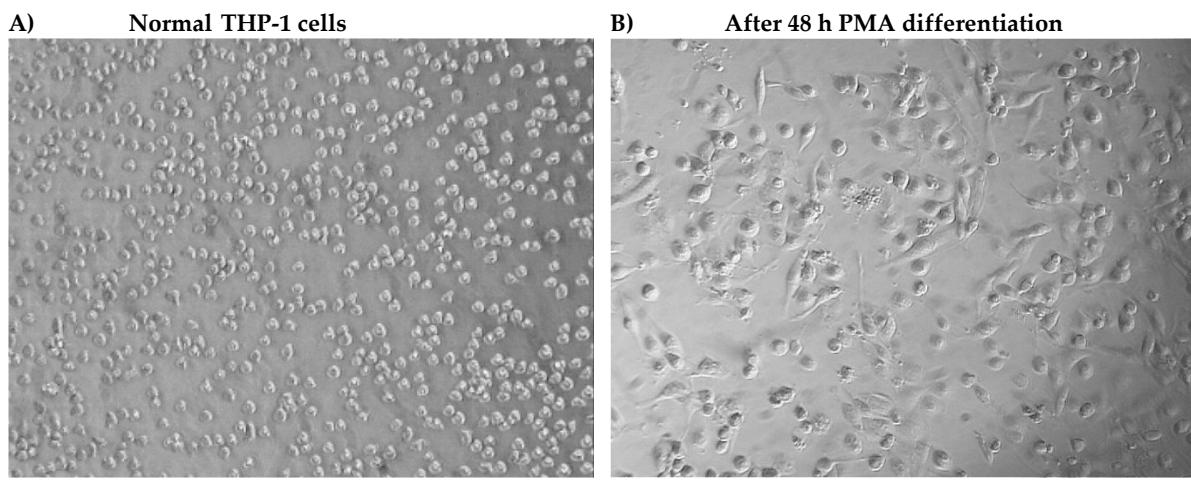

Figure S2: Negative control THP-1 cells (**A**) and it is derived macrophages by the effect of PMA treatment (**B**) at final concentration of 60ng/mL.

TNF- α production

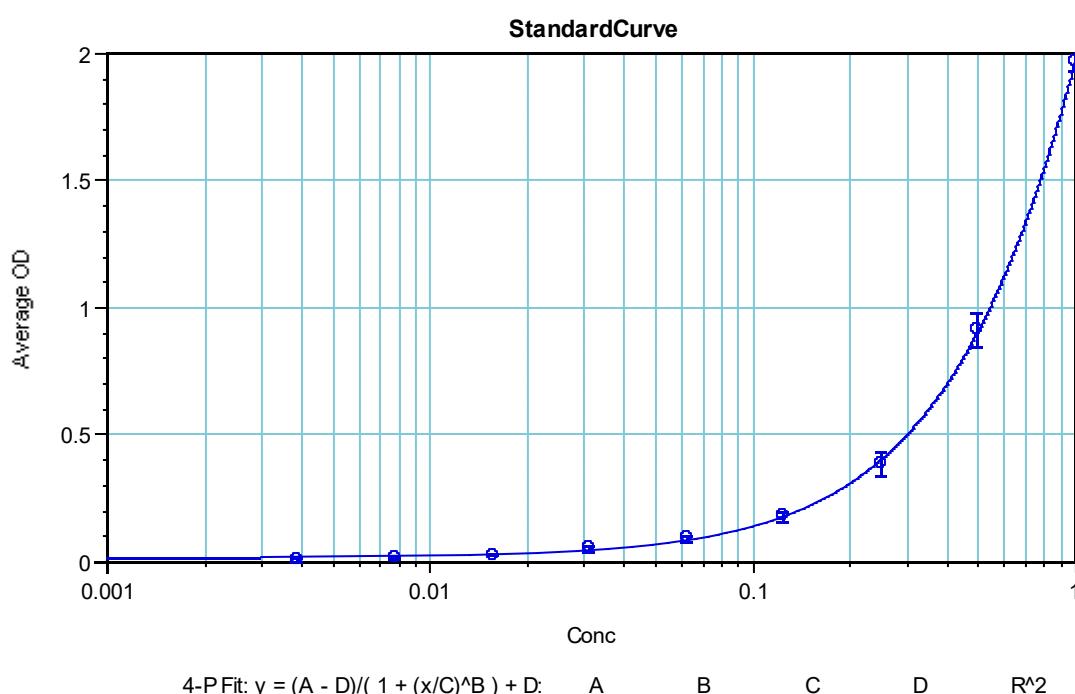

Figure S3: A representative 4-parameter logistic plot of TNF- α standard samples of 9 points showing the values of a , b , c , and d constants and the calibration equation with a perfect fit ($R^2=1.0$). The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

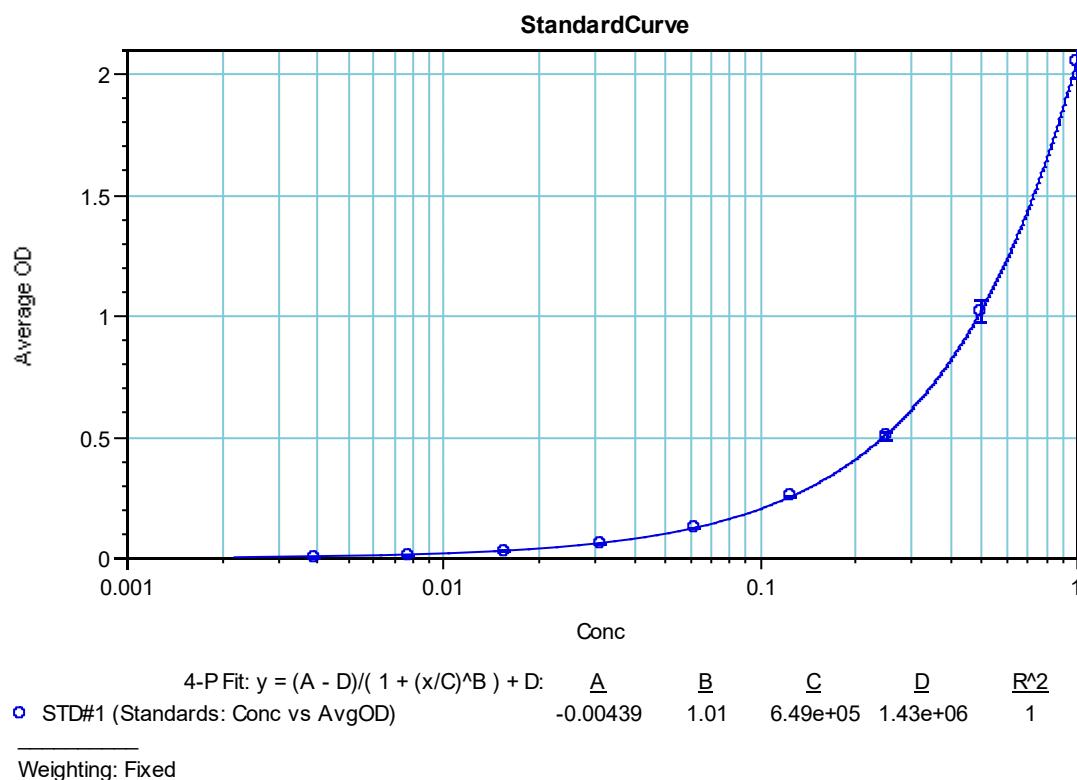

Figure S4: A representative 4-parameter logistic plot of TNF- α standard samples of 9 points showing the values of a, b, c, and d constants and the calibration equation with a perfect fit ($R^2=1.0$). The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

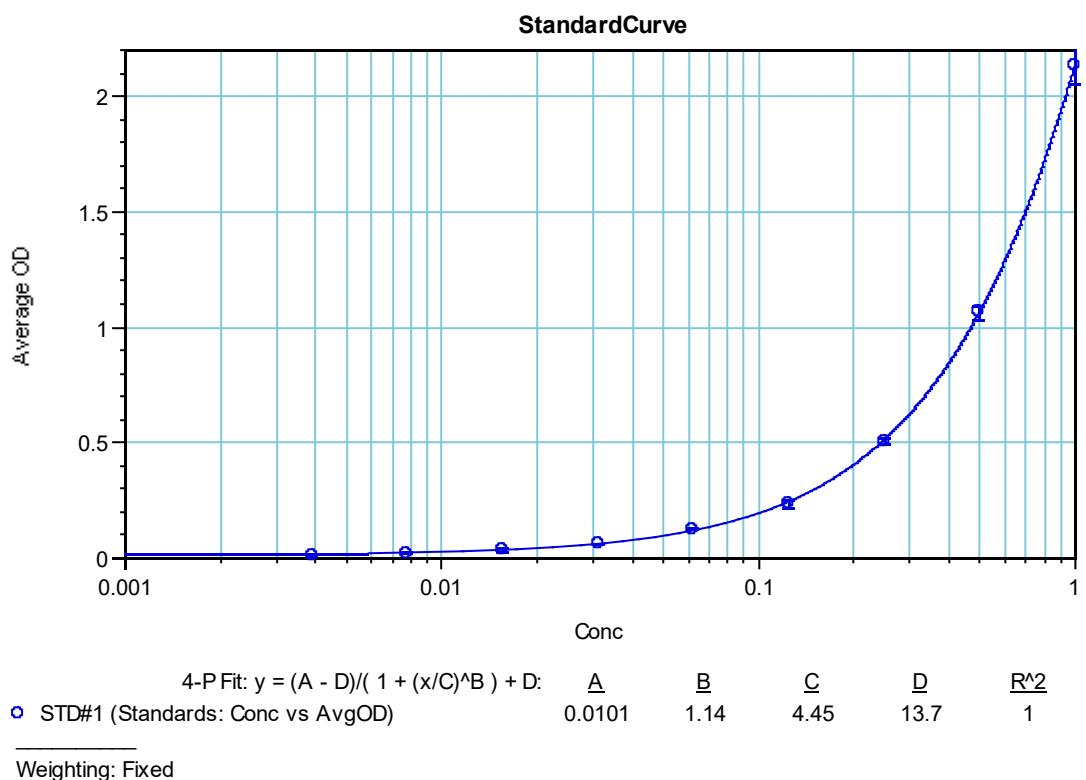

Figure S5: A representative 4-parameter logistic plot of TNF- α standard samples of 9 points showing the values of a, b, c, and d constants and the calibration equation with a perfect fit ($R^2=1.0$). The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

IL-1 β production

Table S2: Effect of melittin (Mel) on the production of IL-1 β cytokines in the presence and absence of LPS on PMA-differentiated THP-1 cells ($n=3$).

The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

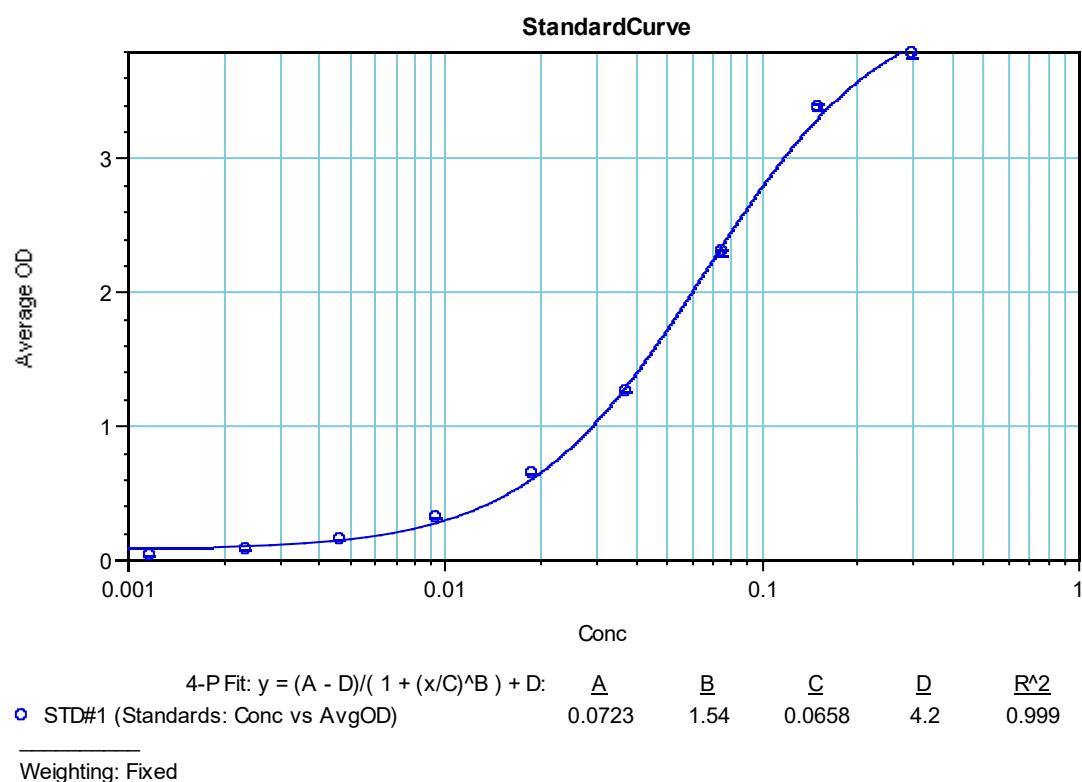

Figure S13: A representative 4-parameter logistic plot of IL-10 standard samples of 8 points showing the values of a, b, c, and d constants and the calibration equation with a perfect fit ($R^2=0.999$). The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

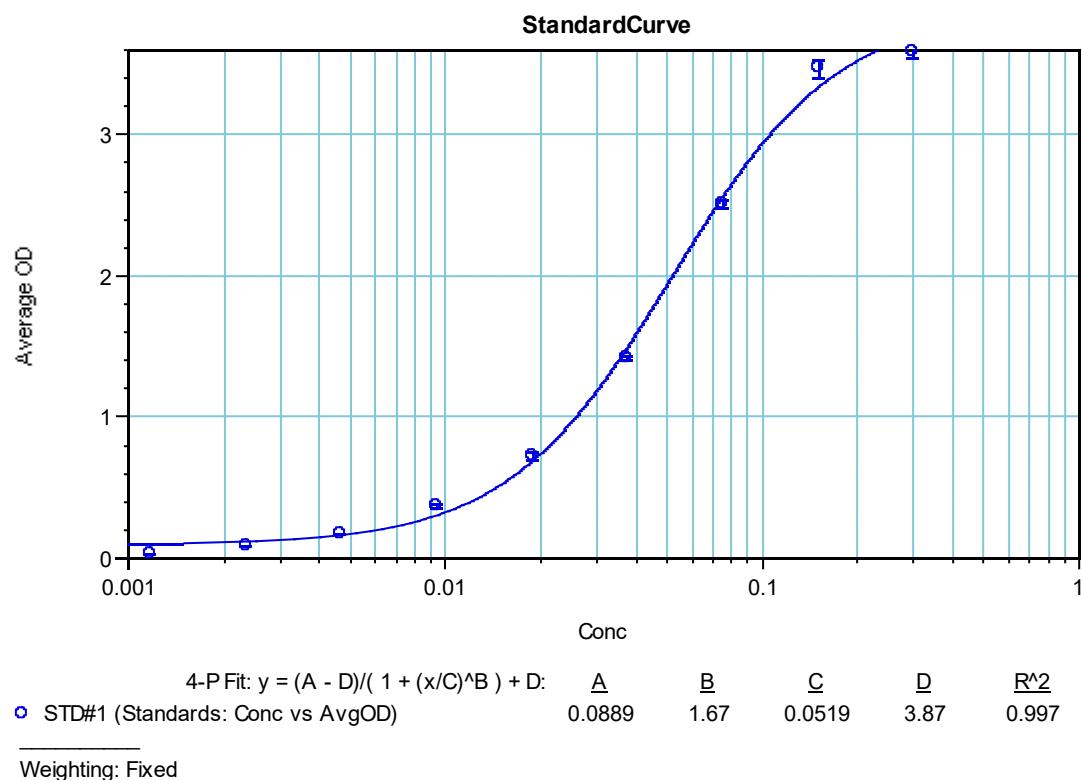

Figure S14: A representative 4-parameter logistic plot of IL-10 standard samples of 8 points showing the values of a, b, c, and d constants and the calibration equation with a good fit ($R^2=0.997$). The data represents the mean \pm SD of optical density (OD) values for duplicate standard concentrations ($n=2$).

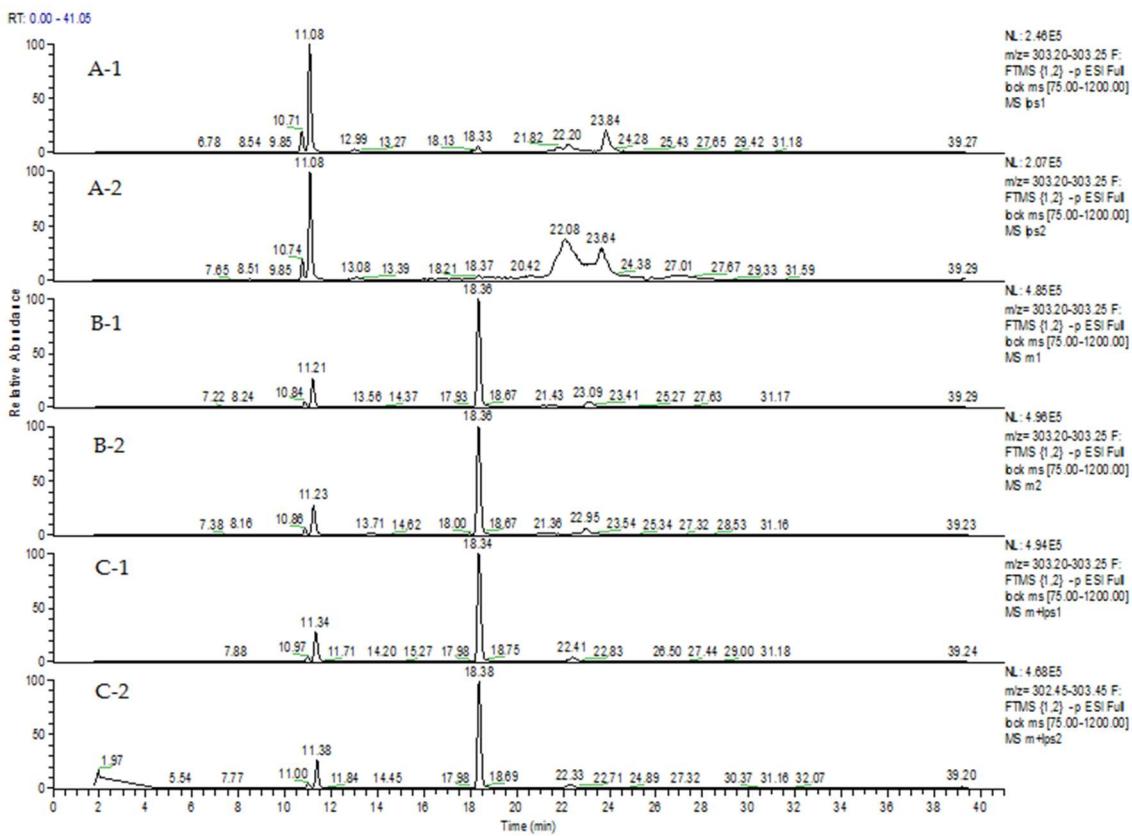

Figure S15: Extracted ion chromatograms for arachidonic acid in THP-1 cells after treated by LPS (A), melittin (B) and the combination of melittin and LPS (C). The level of the arachidonic acid elevated significantly by melittin alone or in combination with LPS. The biological samples were analysed using ACE C4 column.
