Note: N=1083. *B*=Unadjusted regression coefficient, S*E* = Standard Error, Sig. = Significance. The models above are adjusted for gender, age, education, income, ethnicity, and political ideology. Multiple imputation was used to generate 5 imputed datasets (*n=6498*). Imputation models included other wave 1 variables used in the analysis such as attitudes, norms, efficacy, and intentions to get a COVID-19 vaccine.
