Table S2: Changes in A) normally distributed; B) non-normally distributed variables in blood serum; and C) parameters in urine (all non-normally distributed) during SGLT2i medication. ALAT: alanine transaminase. ASAT: aspartate transaminase. CKD EPI: Chronic Kidney Disease Epidemiology Collaboration estimator. eGFR: estimated glomerular filtration rate. GGT: gamma-glutamyltransferase. Hs-TropT: highly sensitive troponinT. INR: international normalized ratio for quick values. NT-proBNP: N-terminal pro-brain-natriuretic peptide. PTT: partial thromboplastin time. A) Paired t-test or Wilcoxon signed-rank test was used, according to the nature of the data.
