

Table S1. Association of baseline characteristics with changes in best-corrected visual acuity throughout the follow-up period.

Characteristics	P-value	β
Age	0.688	-0.030
Sex	0.844	-0.015
Diabetes mellitus	0.195	0.097
Hypertension	0.232	-0.091
Phakia at diagnosis	0.301	0.078
Stage of disease	0.235	-0.087
Reticular pseudodrusen	0.159	-0.111
Type of anti-VEGF agent used for the loading injections	0.098	-0.121
Best-corrected visual acuity	0.812	-0.018

* Statistical analysis was performed using multivariate linear regression.

Table S2. Association between baseline characteristics and changes in best-corrected visual acuity throughout the follow-up period in the non-GA/scar group.

Characteristics	P-value	β
Age	0.590	0.070
Sex	0.825	-0.031
Diabetes mellitus	0.093	0.233
Hypertension	0.792	-0.035
Phakia at diagnosis	0.371	0.121
Stage of disease	0.574	0.069
Reticular pseudodrusen	0.675	-0.059
Type of anti-VEGF agent used for the loading injections	0.372	-0.111
Best-corrected visual acuity	0.308	0.130

* Statistical analysis was performed using multivariate linear regression.
