Supplementary materials legend:

1. **Supplementary Figure S1.** Sphingoid bases concentrations in human plasma, according to scientific literature [18–26], (see paper for the references).
2. **Supplementary Figure S2.** Comparison between the sphingoid bases concentrations evidenced with (D, n=20) or without (ND, n=20) derivatization with phenylisothiocyanate.
3. **Supplementary Table S1.** Differences in signal intensities, expressed as fold-change on underivatized analytes, between the same concentration of sphingoide bases (1 μ M) after derivatization
4. **Supplementary Table S2.** RBCs sphingolipids levels (pmol/10⁶ cells) in healthy volunteers (n=20) were expressed as min-max and mean \pm SD
5. **Supplementary Table S3.** Mass spectrometry parameters for the analysis of complex sphingolipids. In bold are reported the internal standards (IS) used for each package of lipids
6. **Supplementary Table S4.** Mass spectrometry parameters for the analysis of free sphingoid bases
7. **Supplementary Table S5.** Mass spectrometry parameters for the analysis of sphingoid bases as phenylthiourea derivatives after reaction with phenylisothiocyanate
8. **Supplementary Table S6.** Mass spectrometry parameters for the analysis of sphingoid bases as nitrophenylthiourea derivatives after reaction with 4-nitrophenylisothiocyanate
9. **Supplementary Table S7.** The yield of derivatization products after different times and temperatures of reaction. Each experiment was conducted by adding the same amount of reagents, derivatizing agent (PITC), and catalyst (Pyridine)

Supplementary Figure S1. Sphingoid bases concentrations in human plasma, according to scientific literature [18–26], (see paper for the references).

Supplementary Figure S2. Comparison between the sphingoid bases concentrations evidenced with (D, n=20) or without (ND, n=20) derivatization with phenylisothiocyanate.

Supplementary Table S1. Differences in signal intensities, expressed as fold-change on underivatized analytes, between the same concentration of sphingoide bases (1 μ M) after derivatization.

Sphingoid base	Free	PITC	NO ₂ PITC
3KS	1	3.75	3.00
Sph	1	1.56	1.66
S1P	1	0.50	0.34
dhSph	1	2.80	2.40
dhS1P	1	1.00	0.54

Supplementary Table S2. RBCs sphingolipids levels (pmol/10⁶ cells) in healthy volunteers (n=20) were expressed as min-max and mean \pm SD.

Conc (μ M)	Min	Max	Mean \pm SD (n=20)
Cer	12	29.7	18.6 \pm 4.2
dhCer	1.9	7.9	4.5 \pm 1.6
SM	171	400	277.4 \pm 47.5
HexCer	0.7	1.7	1.345 \pm 0.302
LacCer	4.3	23	12.83 \pm 4.765
GM3	0.3	0.9	0.655 \pm 0.173
Sph	0.34	2.3	0.698 \pm 0.55
S1P	0.52	3.4	1.11 \pm 0.795
dhSph	0.02	0.4	0.071 \pm 0.082
dhS1P	0.3	2.2	0.623 \pm 0.512

Supplementary Table S3. Mass spectrometry parameters for the analysis of complex sphingolipids. In bold are reported the internal standards (IS) used for each package of lipids.

Name	MRM (+)	DP (eV)	CE (eV)
