S.D. and F.C. indicate standard deviation and fold change, respectively.

FDR indicate false dscovery rate-corrected P-value.

VIP score indicates variable importance in projection that was obtained from PLS-DA model.

**Supplementary Table S2.** The linearity range of standard mixture samples

| Metabolites            | Regression equation    | slope | intercept | Linarity( $R^2$ ) | Linear range ( $\mu\text{mol/L}$ ) |
|------------------------|------------------------|-------|-----------|-------------------|------------------------------------|
| <b>Positive</b>        |                        |       |           |                   |                                    |

---

Substances that could not be separated are shown with the same color.

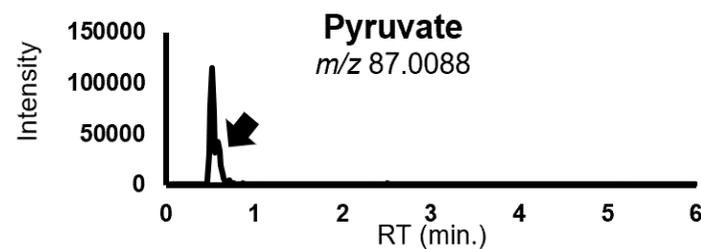

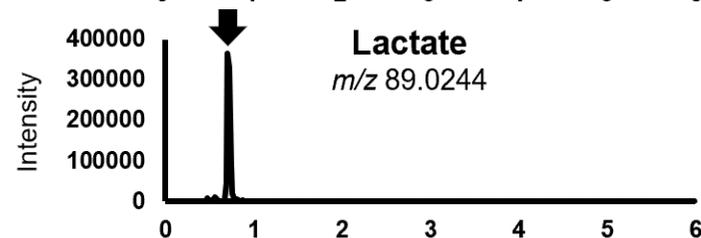

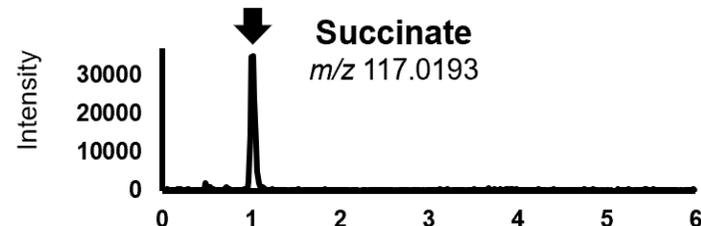

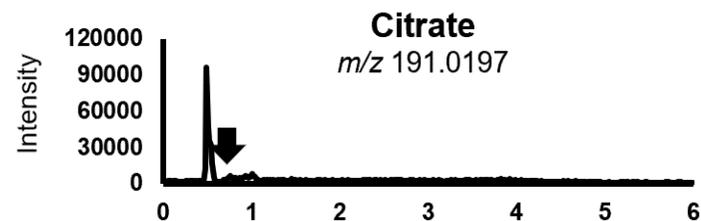

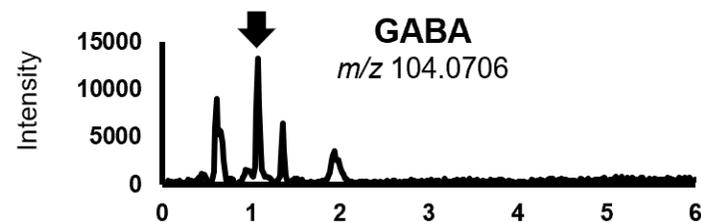

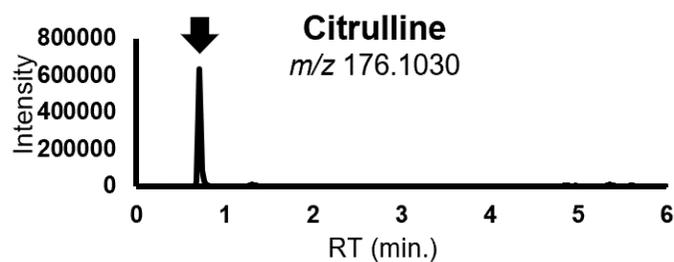

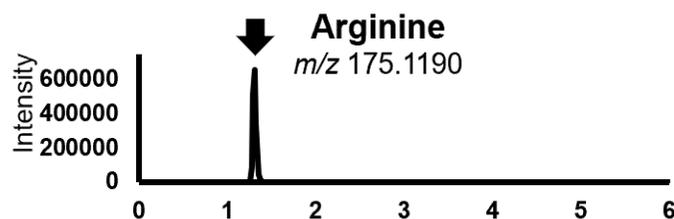

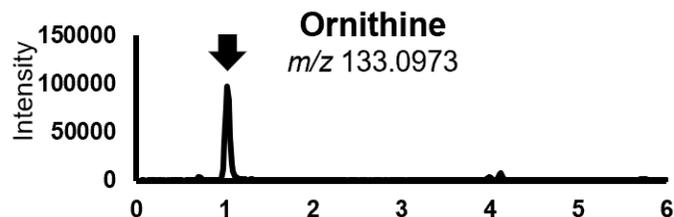

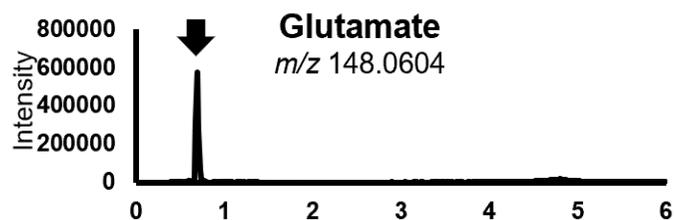

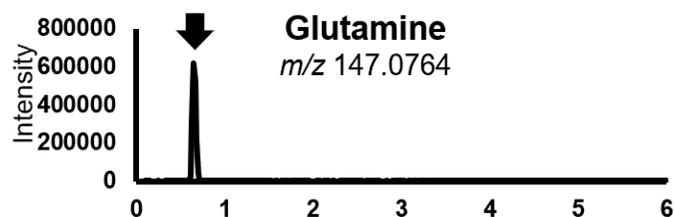

**Supplementary Figure S1.** Change in unstimulated salivary flow rate  
The unstimulated salivary flow rate was evaluated using a 5-min spitting procedure.  $P < 0.05$ , Wilcoxon signed-rank test.
