Table of Content

Tables

Table S1: Summary of mass spectral data supporting peak annotations in coffee brews.

Table S2. Brewed or purchased coffee samples and their characteristics.

Table S3. Coefficients of variation for the coffee compounds identified or tentatively identified.

Figures

Figure S1. PC-PR2 analysis of of metabolomic data from the coffee brew samples, Principal components explaining >80% of the variability were selected.

Figure S2. Boxplots showing means of sums of total intensities of mass spectrometry signals (n = 3670) for each type of coffee brews.

Figure S3. Principal component analysis of constituent profiles of the 18 annotated coffee compounds measured in 76 coffee brew samples. Scores on PC2 and PC3 are shown. (A) Color-coded according to type of coffee brew. (B) Color-coded according to decaffeination. (C) Loading plots.

Figure S4. T-tests comparing different groups of coffee brew samples. Dark line indicates the limit for significant difference after Bonferroni correction. Comparison of dark roasted brews with medium roasted brews, decaffeinated and caffeinated coffee brew samples, coffee brews prepared with Arabica beans and blends of Arabica and Robusta beans; instant coffees to all other coffee brew samples.

Figure S5. Heatmap showing correlations between annotated coffee compounds.

Supplementary spreadsheet (see separate Excel File)

Supplementary Spreadsheet: Chromatograms and spectra supporting annotation of compounds.

Table S1: Summary of mass spectral data supporting peak annotations in coffee brews.

Assigned identity 1	Formula	Observed m/z	Ion	Mass difference (delta ppm)	Retention time (min)	Annotation level ¹

¹ Brands 1-17: Caf   Najjar, Choc Full O Nuts, 8 O'Clock, Folgers, Green Mountain, Klassno, Lavazza, Loumidis, Marley, Maxwell, Mehmet, Nescafe, Nescafe Tasters' Choice, Nespresso, Peets, Safeway; Caf  /Restaurant 1-4: Dunkin, McDonalds, Panera, Starbucks.

Table S3. Coefficients of variation for the coffee compounds identified or tentatively identified.

Compound	Blinded QC1	Blinded QC2	Pooled QC
1-(2-Furanyl)-1,2-butanedione	5.3	3.4	8.3
N-Methyl-2-pyrrolicarboxaldehyde	13.6	8.1	16.9
3,4-Dicaffeoylquinic acid lactone		6.6	10.8
3,4-Dimethyl-1,2-cyclopentanedione	11.3	4.7	8.6
3,5-Dicaffeoylquinic acid	24.0	12.9	14.1
3-Caffeoylquinic acid	17.0	7.2	10.0
5-Caffeoylquinic acid	20.7	6.6	11.3
5-Hydroxymethylfurfural	3.3	5.9	15.2
alpha-Furyl methyl diketone isomer (i)	10.8	4.8	8.5
alpha-Furyl methyl diketone isomer (ii)	8.8	3.3	8.2
Atractyligenin	12.3	5.7	7.5
Cafamarine	17.4	11.5	13.0
Cafestol	15.8	11.3	9.0
Caffeoylquinic acid isomer (i)	14.3	7.8	10.8
Caffeoylquinic acid isomer (ii)	21.6	8.2	12.3
Caffeoylquinic acid isomer (iii)	20.5	7.9	11.7
Caffeoylquinic acid lactone isomer (i)	10.1	9.0	9.2
Caffeoylquinic acid lactone isomer (ii)	8.6	5.7	9.3
Cinnamoylglycine	6.9	3.6	7.8
Citramalic acid	13.0	6.8	9.4
Coixinden A	12.8	12.6	11.2
Coumaroylquinic acid isomer (i)	15.4	6.8	9.9
Coumaroylquinic acid isomer (ii)	18.8	21.5	14.9
Coumaroylquinic acid lactone	15.1	9.8	12.0
Cyclo(isoleucyl-prolyl)	13.5	3.6	8.0
Cyclo(isophenylalanyl-prolyl)	9.1	3.3	8.2
Cyclo(leucyl-phenylalanyl)	16.1	6.3	7.3
Cyclo(leucyl-prolyl)	9.8	3.5	10.1
Cyclo(phenylalanyl-prolyl)	9.1	3.2	5.8
Cyclo(prolyl-prolyl)	7.1	3.0	5.9
Cyclo(prolyl-valyl)	16.2	6.8	8.7
Dicaffeoylquinic acid isomer*	21.7	12.7	12.9
Feruloylquinic acid isomer (i)	21.4	6.9	10.9
Feruloylquinic acid isomer (ii)	21.2	4.8	9.6
Guanosine	14.1	7.1	10.9
Methyl-2-pyrrolicarboxaldehyde	6.9	6.6	6.1
N-p-Coumaroyltryptophan	20.7	11.4	10.7
N-Caffeoyltryptophan	18.4	9.3	12.6
Paraxanthine	10.2	9.3	11.8
Sotolone	31.4	23.9	28.4
Theobromine	10.1	4.3	8.0
Theophylline	10.6	3.6	9.4
