

# Ageing investigation using two-time-point metabolomics data from KORA and CARLA studies

## Supplementary Materials:

**Table S1.** The list of 123 metabolites measured and passed quality control in KORA S4 and F4 and in comparison with the median values from literature.

The list shows all 123 metabolites measured in both KORA S4 and F4 and in comparison with the median values from literature. The coefficient of variation (CV) of each metabolite measured from the reference samples of AbsoluteIDQ™ p180 Kit and AbsoluteIDQ™ p150 Kit are shown respectively. A total of 122 metabolites passed quality control (CV < 25% in both time-points). The medians (in  $\mu\text{M}$ ) of 122 metabolites measured with AbsoluteIDQ™ p180 Kit (used in KORA S4) and AbsoluteIDQ™ p150 Kit (used in KORA F4) using the same reference human plasma samples are shown below. To ensure normalization quality, outliers with metabolite concentration of over the range of median  $\pm$  1.5 interquartile range were excluded before median values of the reference samples were calculated. The normalization factor (NF) for each metabolite equals to the median values of the reference samples measured in AbsoluteIDQ™ p180 Kit divided by the median values measured in AbsoluteIDQ™ p150 Kit. Then, the metabolite concentration of each sample in KORA F4 was adjusted by multiplying the concentration values to the NF of their corresponding metabolites. CV, coefficient of variation. ND, not detected. NF, normalization factor.

Metabolite	Biochemical name	CV	CV	Median	Median	Median	Median	NF	Applicati

**Table S2.** Changes in metabolite concentration in KORA Study in women ( $N = 317$ ) and men ( $N = 273$ ) over seven-year period.

Beta estimates ( $\beta$ ) and confidence interval (CI) of changes in metabolite concentration every year were calculated using multivariate generalised estimation equation models. The model was adjusted for chronological age at baseline, body mass index, physical activity, smoking status, alcohol intake and systolic blood pressure. Significant P values after Bonferroni correction (cut-offs:  $P$  value  $< \frac{0.05}{122} = 4.1 \times 10^{-4}$ ) and their false discovery rate-adjusted P values (pFDR) at 5% level were highlighted in bold. xLeucine, sum of leucine and isoleucine.

Metabolites	Women in KORA (n = 317)			Men in KORA (n = 273)		
	$\beta$ (95% CI)	P value	pFDR	$\beta$ (95% CI)	P value	pFDR

**Table S3.** Replication results of the changes in metabolite concentration in CARLA study.

The table shows the replication results in CARLA study based on the 72 and 81 significant metabolites identified in discovery (KORA) study in women and men respectively. Metabolites that were not available for replication due to limit of detection (LOD) were indicated. Beta estimates ( $\beta$ ) and confidence interval (CI) of changes in metabolite concentration every year were calculated using multivariate generalised estimation equation models. The model was adjusted for chronological age at baseline, body mass index, physical activity, smoking status, alcohol intake and systolic blood pressure. Significant P values after Bonferroni correction (cut-offs: P value  $<\frac{0.05}{53} = 9.5 \times 10^{-4}$  in women and P value  $<\frac{0.05}{58} = 8.7 \times 10^{-4}$  in men) and their false discovery rate-adjusted P values (pFDR) at 5% level were highlighted in bold. xLeucine, sum of leucine and isoleucine.

Metabolites	Women in CARLA (N = 195)			Men in CARLA (N = 191)		
	$\beta$ (95% CI)	P value	pFDR	$\beta$ (95% CI)	P value	pFDR

**Table S4.** The list of metabolite concentration of 122 metabolites analyzed in KORA S4 and F4.

The list shows the mean (in  $\mu\text{M}$ ), standard deviation and median values (in  $\mu\text{M}$  of all 122 metabolites measured in both KORA S4 and F4. The metabolite concentration values shown in KORA F4 were after inter-kit normalisation by multiplying the concentration values to the NF of their corresponding metabolites. SD, standard deviation. xLeucine, sum of leucine and isoleucine.

Marker	Women in KORA (n = 317)						Men in KORA (n = 273)					
	KORA S4			KORA F4			KORA S4			KORA F4
