## Table of contents

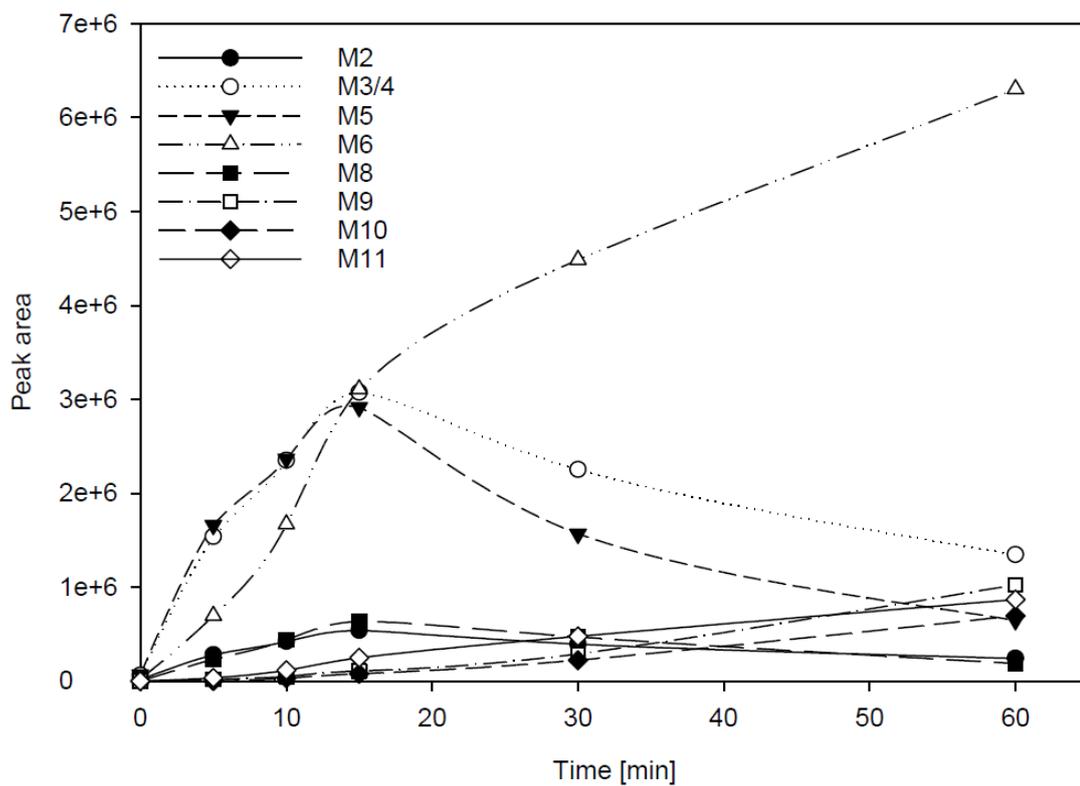

<b>Table S1.</b> Molecular ions of EnnB1 and EnnB1-related metabolites by LC-ITMS.	S3
<b>Figure S1.</b> Representative LC-ITMS chromatograms of extracted ammoniated molecular ions at $m/z$ 687 (A), $m/z$ 685 (B), and $m/z$ 701 (C) of the putative ENNB1 metabolites M1 toM11 detected after 15 min incubation with HLM .	S4
<b>Figure S2.</b> Formation of the putative ENNB1 metabolites M2 toM6 and M8 toM11 in HLM. Results are expressed as mean peak areas of three independent microsomal incubations. M7 was not included because of low signal intensity.	S5
<b>Figure S3.</b> Formation of the major MDZ metabolites 1-OH-MDZ, 4-OH-MDZ and 1,4-OH-MDZ. Results are expressed as mean peak areas of three independent microsomal incubations.	S6
