

## Supplementary Materials

**Figure 1.** The effects of GPE, MEM, GPE1, GPE2 and GPE3 on cell viability rates in differentiated SHSY5Y cells (MTT assay; % Cell viability). Symbol (\*) represents statistically significant ( $p < 0.05$ ) decrease in cell viability as compared to negative control (control-) group.

**Figure S2.** The effects of GPE, MEM, GPE1, GPE2 and GPE3 on cell viability rates in differentiated SHSY5Y cells (LDH assay; % Cell viability). Symbol (\*) represents statistically significant ( $p < 0.05$ ) decrease in cell viability as compared to negative control (control-) group.
