

Table S4. Annotations found on IDRs in the model organisms

<u>Organism</u>	<u>mutagenesis site</u>	<u>region of interest</u>	<u>short sequence motif</u>
Mouse	1703	253	1160
Rat	620	161	575
A. thaliana	932	44	595
yeast	614	161	575

The predictions of IDRs were done only by DICHOT, and the annotations shorter than 10 residues were considered.
