

Supplemental figure 1. Leaf content of starch (A), soluble proteins (B), hexoses (C), sucrose (D) dehydroascorbate to ascorbate ratio (DHA:Asc) (E) and oxidized to reduced glutathione ratio (GSSG:GSH) (F). Bar colors and experimental design are as in Figure 1. The values are mean \pm S.D. (n = 3). Significance of the main factors (nutrient solution, biostimulant and salinity) and their interactions is shown in Tables 3 and 4.
