

Figure S1. a-f. Trichomes morphotypes in the investigated *Helichrysum* populations. **a.** SEM micrograph showing the long filamentous non-glandular hairs. **b-d.** Micrographs showing the club-shaped glandular trichome morphotypes: general view (b, SEM); longitudinal section stained with Toluidine Blue (c, LM); terpenoidic nature of the secreted material stained with Nadi reagent (d, LM). **e-g.** Micrographs showing the duplex glandular trichome morphotypes: general views of the ovary surface in population A samples (e, SEM) and population B samples (f, SEM); muco-polysaccharidic nature of the secreted material stained with Alcian (g, LM). *Scale bars = 25 μ m.*

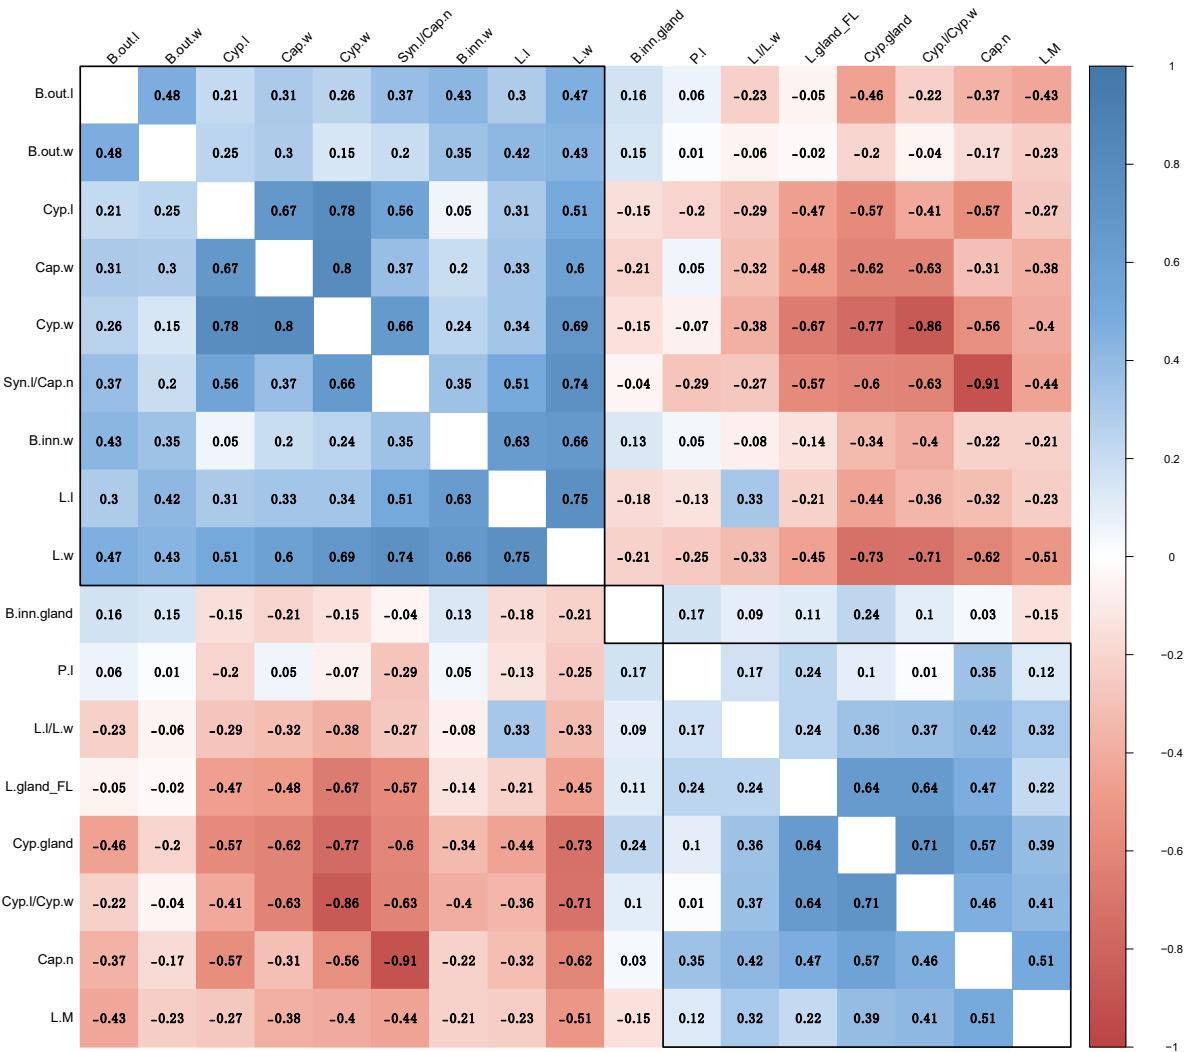

Figure S2. Spearman's correlation coefficients among morphological significant characters.

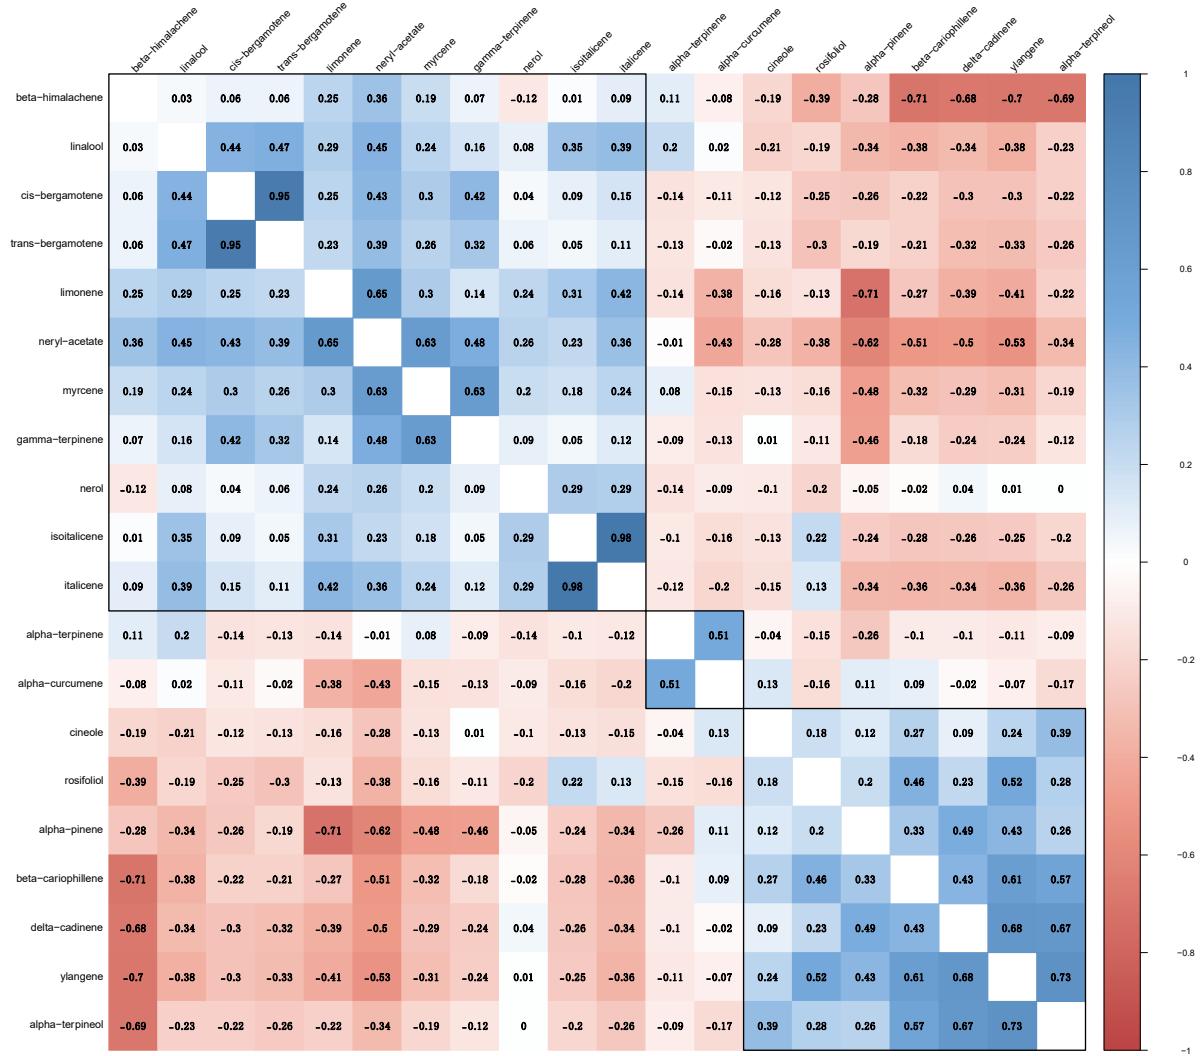

Figure S3. Pearson's correlation coefficients among phytochemical significant compounds of flower tissue.

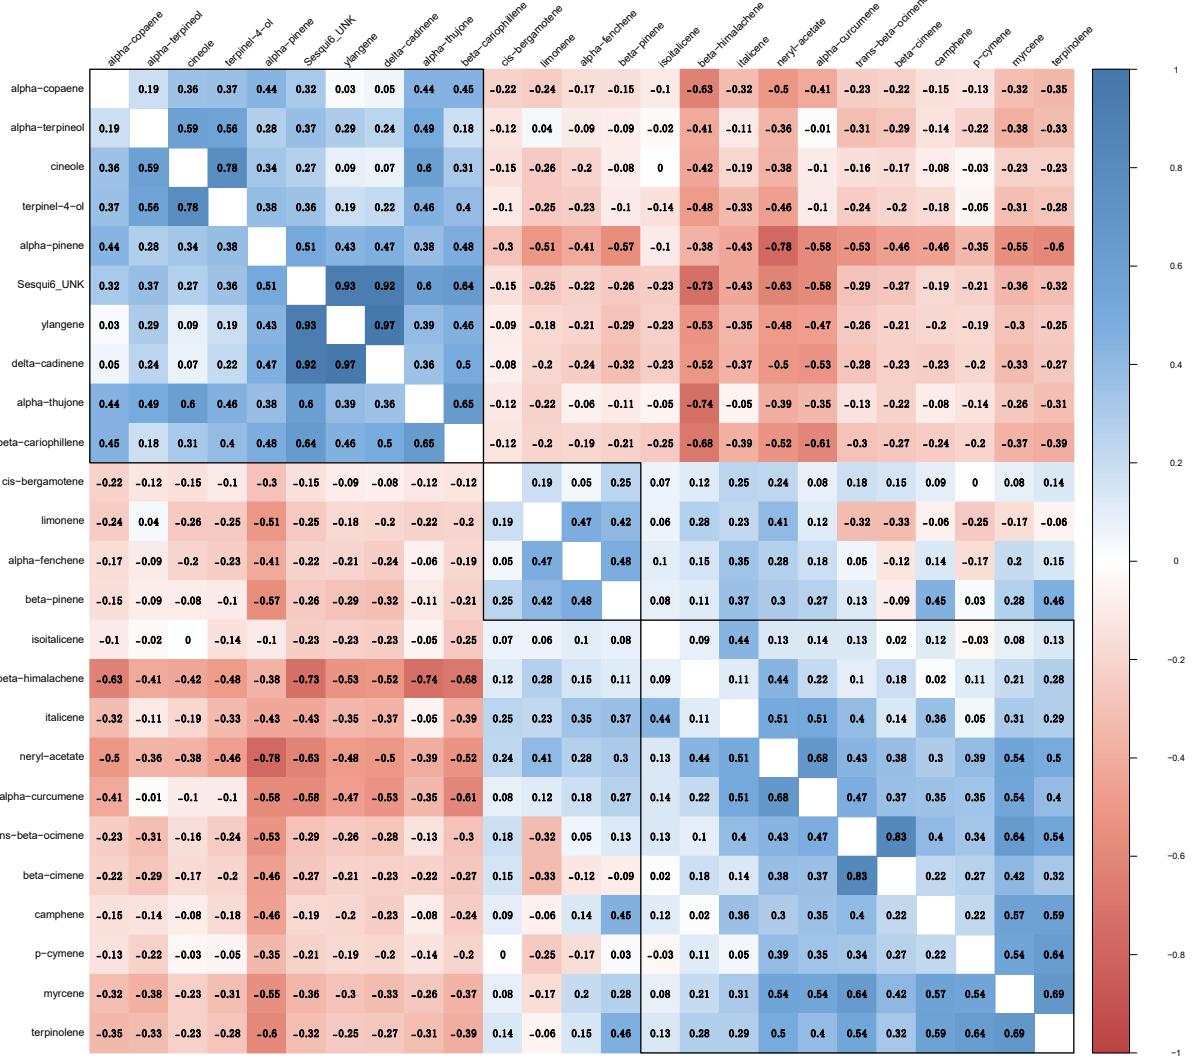

Figure S4. Pearson's correlation coefficients among phytochemical significant compounds of leaves tissue

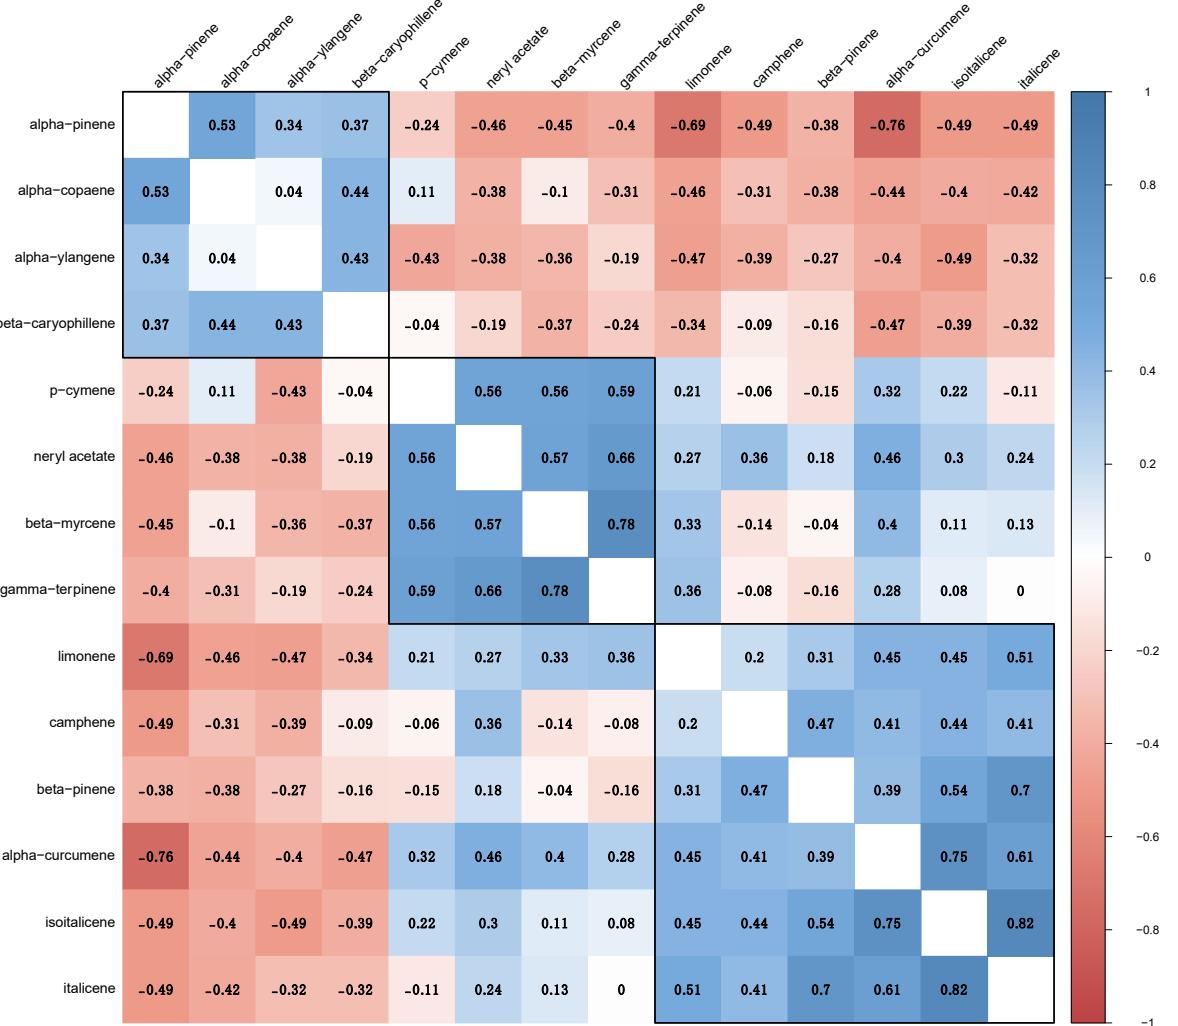

Figure S5. Pearson's correlation coefficients among phytochemical significant compounds of bark tissue.

Table S1. Contribution of morphological characters on the principal components (Dim.). The values reported are the square coordinates of the variables representing the contribution of the variables on the principal components. A high value indicates a good representation of the variable on the principal component.

Table S2. Phytochemical analysis of flower, leaves and bark tissue from Capo d'Enfola (A) and Monte Capanne (B) population in Elba Island. Data are the mean of individuals \pm SD. nd = not detected, tr: trace (< 0.1%). *H. litoreum* is reported in population A, and *H. italicum* subsp. *italicum* in population B. ^a MH = Monoterpene Hydrocarbon; OM = Oxygenated Monoterpene;; SH = Sesquiterpene Hydrocarbons; OS = Oxygenated Sesquiterpene. ^b Kovant's Retention Index. ^c Identification: "RI; MS" means that the compound was tentatively identified by Kovant's Retention Index (RI) and matches with database spectra in the NIST11 mass spectral library (MS); "Std" means that the identification of the molecules was confirmed by comparison of RI and the mass spectra with those of available standard compounds.
