

**Table S1.** List of processes based on the GSEA analysis of MSigDB gene sets enriched in HNSCC patients with lower and higher levels of *miR-154-5p* in all localization as well as depending on the localization in oral cavity, larynx or pharynx. Only gene sets with nominal  $p < 0.05$  were presented; SIZE - number of enriched genes in specified process, ES - enrichment score, NES - normalized enrichment score, FDR q-val - false discovery rate.
