

Special Issue

Actuators Technologies for the Next Generation of Robots and Industry

Message from the Guest Editors

Actuators are crucial components in any mechatronic system, have experienced major growth throughout the years, especially given the increasing demands on human–robot interaction systems for different applications, such as industry, rehabilitation robotics, social robots, and smart structures. In this context, novel actuator technologies such as soft actuators (including polymeric, fluidics, and series elastic actuators) and others compliant actuators have been proposed with varying degrees of success. This Special Issue invites contributions dealing with the research and development of compliant actuators—including design, control, applications, and modeling—which constitute the backbone of the next generation of robots and industry. Prof. Dr. Arnaldo Leal Junior Prof. Dr. Anselmo Frizzera Neto

Academy Professor, Emeritus Academy Institute, The Pennsylvania
State University, University Park, PA 16802, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:

indexed within SCIE (Web of Science), Scopus, Inspec, and
other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2
(Control and Optimization)
