Message from the Guest Editors

Crop diseases caused by pathogenic bacteria and fungi have seriously affected human society and nature through their damage to food production, economic development, ecological resilience, and natural landscapes over human history. In addition, many pathogens produce toxins that directly or indirectly threaten the health of humans and animals. Thereby, using a promising approach to disease management is of the essence. Among all control approaches for crop diseases, biological control is a method by inhibiting pathogens, improving plant immunity, and/or modifying the environment through the effects of beneficial microorganisms, compounds, or healthy cropping systems.

This Special Issue focuses on explore more environmentally friendly microorganisms for crop diseases controlling, improving the performance of selected antagonists and studying their modes of action. This Special Issue on Biological Control of Crop Pathogenic Bacteria and Fungi will include interdisciplinary studies embracing agriculture with disciplines of microbiology, chemistry, molecular biology, fermentation technology and microbiome.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
