submissions:

25 January 2025

Message from the Guest Editors

Mycotoxin contamination can occur at any stage of the feed supply chain, including crop cultivation, harvesting, storage, and the distribution of crops and compound feeds. To minimize mycotoxin contamination, preventative measures are essential.

Several approaches, including chemical and biological methods as well as the use of mycotoxin-detoxifying agents, are widely implemented to control mycotoxins in farm animals under field conditions. However, there remains a continuous need for the development of novel detection and decontamination strategies for effectively managing mycotoxin risks.

We invite you to contribute to this Special Issue by submitting original research, case studies, or review papers that provide insights into mycotoxicosis in farm animals and its implications for health disorders, as well as prevention strategies under field conditions. Your contributions will play a crucial role in advancing our understanding and management of mycotoxin risks.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
