submissions:

**closed (25 April 2024)**

### Message from the Guest Editors

Climate change has caused substantial damages and increasingly irreversible losses in agro-ecological systems. In the agricultural system, how to coordinate the relationship between crop growth and the environment is important for the sustainable development of agriculture. At the same time, how to reduce the impact of climate change on agricultural production and make full use of the environmental changes caused by climate change is an important topic in current agricultural studies. In this context, it is necessary to promote understanding of the interactions between agriculture, ecosystems, environment, and climate change.

This Special Issue focuses on the changes in the ecological environment in the agricultural system, the response, and adaptation strategies of the agricultural system under the threat of climate change. Within this framework, studies concerning the farming system, assessment of the sustainability of agro-ecosystems, environmental impact assessment, crop growth and development under stress conditions, and the mitigation strategies of stress conditions are welcome, as are other related topics in the form of both specialized and interdisciplinary manuscripts.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
