Message from the Guest Editors

The control of diseases and pests in many crops can be a challenge. The development of agents to control plant diseases is an important topic in agricultural science. Biological control has become one of the most important developments in this effort. It is mainly based on the use of microorganisms with different functions. Current research on these strains concerns not only their effects on plants, but also their in-depth phenotypic and genetic characterization. Classical and modern microbiological methods make it possible to study the phenotypic properties of a given strain and its ability to grow under unfavorable environmental conditions. Analysis of the genome of a bacterial strain makes it possible to determine the strain's potential ability to fight pathogens and promote plant growth.

This Special Issue focuses on finding ways to reduce the incidence of plant diseases through the use of microorganisms. The articles composing this Special Issue will cover interdisciplinary research, including microbiology and plant pathology. Articles describing metataxonomic research conducted to understand the microbiomes of different environments are also welcome.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
