Deadline for manuscript submissions:

closed (25 February 2025)

Message from the Guest Editors

Agriculture is historically vital to the prosperity of civilizations and has withstood the pressure of the environment and population growth due to genetic improvement and plant management. Most agricultural crops are subject to environmental stresses such as drought and salinity. In many cases, these stresses act together, limiting crop productivity. In this view, innovative management strategies can improve the productivity of agricultural crops subjected to unfavorable environmental conditions, such as drought and salinity.

This Special Issue focuses on developing and evaluating management strategies for crops subjected to drought and salt stress. For this reason, it welcomes studies of an interdisciplinary nature from research fields related to agriculture, including horticulture, genetics, plant ecophysiology, irrigation, soils, and plant nutrition. Research articles will cover various agricultural crops and solutions for growing them under drought and salt stress conditions. Original research articles and reviews will be accepted.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
