submissions:

closed (25 July 2024)

Message from the Guest Editors

While crop residues such as straw and husks largely remain on the field, residues from animal production such as slurry, solid manure, and slaughterhouse waste are used in the biogas process chain or numerous other utilization processes, and, in some cases, are also returned to agricultural production in the fields. Many of these nutrient cycles appear to be ready for the future. However, further utilization pathways are on the rise, including (i) the thermochemical conversion of plant residues to provide bioenergy or biochar, and (ii) the separation of residues from animal production into solid and liquid phases so that parts of the nutrient surpluses (e.g., phosphorus) can be countered with nutrient exports.

This Special Issue aims to shed light on the status and future prospects of agricultural waste by compiling the latest findings on the reduction, optimized use, and utilization of agricultural waste, as well as by identifying opportunities for a more holistic sustainability assessment of agricultural waste utilization webs. Value chains and value webs of bioenergy, as well as biobased products and product components, will be considered.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
