Message from the Guest Editors

The uses of biochar in environmental protection include the remediation of polluted soils, energy production, climate change aspects, waste management, and sustainable development issues. The production of biochar allows a reduction in the need for the disposal of animal and plant waste. From an agricultural point of view, the application of carbonization products for soil amelioration seems to be beneficial because the treatment improves the conditions for plant growth, leading to a better yield. Furthermore, due to the rapid effects and relatively low costs of such treatment, biochars are becoming more frequently used in soil remediation and conservation.

In this Special Issue, authors are actively invited to submit their papers covering high-quality novel research, as well as review studies regarding the use of biochar as a material used in agricultural systems. This Issue is devoted to interdisciplinary research on the production of biochar, optimization of the pyrolysis process, and the possibility of biochar use as a fertilizer in laboratory research, as well as field crops.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
