submissions:

20 September 2024

Message from the Guest Editors

Rice is the staple food of more than half of the world's population and improving rice production is a major challenge due to the global population explosion and climate change. With the rapid development of molecular biology in recent decades, molecular breeding using molecular marker-assisted selection, genome-wide selection, and other techniques has shown great advantages in improving the agronomic traits of rice. Additionally, genome editing technology can accurately modify the DNA sequences of multiple genes simultaneously and in a short period of time, which represents great application prospects for improving multiple traits in a variety of species, including rice.

This Special Issue focuses on recent advances in the role molecular breeding plays in improving the agronomic traits of rice. Submitted papers could cover the development of high-throughput molecular marker-assisted selection modules for several key known genes that are important for agronomic traits, the mining of breeding-favorable alleles of known genes or unknown genes, and the validation of their functions. All original research, opinions, and reviews are welcome.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
