Deadline for manuscript  
submissions:

**15 January 2025**

### Message from the Guest Editor

Due to the effects of uncertain climate factors in crop growth, advanced technologies have come to play an increasingly significant role in agricultural production. An intelligent greenhouse and plant factory system, in combination with the greenhouse and plant factory, intelligent equipment such as sensors, and the Internet of Things, successfully optimizes the crop growth environment. Through precise monitoring of crop growth conditions such as temperature, moisture, sunlight, etc., agricultural workers can adjust the indoor artificial lights and control the irrigation frequency to improve crop photosynthesis and water use efficiency, improving the yield and quality of fruits and vegetables. Compared with traditional greenhouses, intelligent, automated, and scientific greenhouses, and plant factories have become indispensable parts of modern agriculture.

This Special Issue will collect a range of articles and reviews associated with the greenhouse and plant factory environmental control system.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
