### Message from the Guest Editor

Dear Colleagues,

Biomass energy is a renewable, energy-efficient and environment-friendly energy that could play an important role in the optimization of the energy consumption structure, the increase of agricultural productivity and the improvement of environmental conditions. Agricultural wastes are regarded as the most important raw materials for biomass energy production, and can be converted into solid, liquid and gaseous fuels or other energy products through direct combustion, chemical methods, thermochemical conversion, and biological conversion. From this aspect, the utilization of biomass energy mostly refers to the treatment and use of agricultural waste by those bioenergy conversion technologies, while the byproducts from bioenergy generation can be also applied in the agriculture.

This Special Issue focuses on utilization of biomass energy in agricultural wastes conversion processes, the valorization of the byproducts, the conversion technology and equipment, and its commercial mode. Industrial policy, economic analysis, and environmental impact assessment of biomass energy can be also included in this Issue. Original research articles and reviews are welcome.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
