Deadline for manuscript
submissions:

25 February 2025

Message from the Guest Editors

The application of crop protection equipment to spray chemical pesticides can significantly improve agricultural production efficiency, reduce manual labor intensity, and minimize the harm of pesticides to people. Based on the rapid development of information technology, plant phenotype, and advanced manufacturing, smart crop protection equipment is formed by deeply integrating emerging technologies such as big data, remote sensing, and artificial intelligence with the development of agricultural equipment.

This Special Issue aims to introduce innovative theories, methods and applications of smart crop protection technology and equipment. Topics of interest include, but are not limited to, the following: efficient and precise pesticide spraying technology and equipment; droplet deposition and drift control; construction and simulation of spray numerical model; remote sensing detection of crops, pests, diseases, and weeds; pesticide spraying decision; key components for precise spraying; crop protection robot; crop protection UAV and low-altitude and low-volume aerial pesticide application; low carbon drive and multi-machine collaboration for crop protection equipment; etc.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
