Message from the Guest Editors

Plants provide over 80% of the food consumed by humans, and are the primary source of nutrition for livestock. However, plant diseases and pests often threaten the availability and safety of plants for human and animal consumption. Global yield losses of important staple crops are reaching hundreds of billions of euros. Plant diseases and pests can radically influence the availability of healthy food all around the world. In food production, holistic measures to control plant diseases are needed. In many agricultural areas, fungal plant pathogens may be a source of harmful mycotoxins. For the modeling and development of efficient and environmentally friendly management strategies of fungal plant pathogens, highly effective pathogen identification and monitoring methods have to be developed and applied.

This Special Issue focuses on the Identification and Management of Fungal Plant Pathogens. It will include interdisciplinary studies embracing biology, chemistry and engineering, and will cover field crops as well vegetable and ornamental crops. All types of articles, such as original research papers, opinions, and reviews, are welcome.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
