Message from the Guest Editor

Dear Colleagues,

Modern agriculture increasingly demands an alternative to existing synthetic chemicals (fertilizers and pesticides). New nutrient formulations are sought not only in order to respond to changes in international laws and regulations, but also to consumer needs. In this context, a combination of biotechnology and nanotechnology could be key to revolutionizing agricultural systems and providing solutions to current problems. Within these agricultural systems are included the development and use of new formulations that present greater fertilizer efficiency and intelligent fertilizers with controlled release of nutrients and bioformulations based on bacteria or enzymes.

Thus, we are pleased to announce this Special Issue on “Innovations in Crop Nutrition and Fertilization toward Sustainable Agriculture” that will be a compilation of high-standard scientific research, reviews, and opinion articles. This Special Issue will address new and sustainable crop nutrition and fertilization strategies that allow to obtain a better production and quality of sustainable vegetables.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
