Institute, Hangzhou, China

Dr. Yong-Feng Shi

Chinese National Center for Rice
Improvement, China National
Rice Research Institute,
Hangzhou 310006, China

Deadline for manuscript
submissions:

closed (15 March 2024)

Message from the Guest Editors

With the rapid development of DNA markers, gene mapping and cloning in the last three decades, research on rice has made great progress in terms of improving grain yield, nutrition quality and environmental performance, achieving substantial progress for global food security. However, the balance of yield, cooking and taste quality and disease resistance is a daunting challenge in crop breeding due to the antagonistic relationship between these aspects. The biggest bottleneck is to develop and utilize genomic technologies, based on germplasm resource mining and functional genomics dissection, which would greatly facilitate more efficient and precise breeding.

This Special Issue focuses on the most recent innovations and advances in rice molecular breeding, aiming to achieve high and stable yield, superior quality, multi-resistance, wide adaptability and simplified cultivation. This issue will cover a broad range of molecular breeding approaches, including, but not limited to, functional marker-assisted selecting, gene pyramiding, rational design, GWAS, artificial intelligence and genome editing.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
