Deadline for manuscript
submissions:

30 November 2024

Message from the Guest Editors

Addressing plant diseases is crucial for sustaining global food production and ensuring food security for a growing population. Novel breeding techniques (NBTs) offer innovative ways to improve disease resistance in horticultural crops. Some of the key NBTs include genome editing, RNA interference (RNAi), marker-assisted Selection (MAS), transgenic approaches, genome-wide association studies (GWAS), mutagenesis techniques, synthetic biology, bioinformatics, and computational approaches to predict candidate genes associated with disease resistance. Furthermore, epigenetic engineering at the target sites involved in the disease resistance mechanism could be an emerging approach for crop improvement. By combining these novel breeding techniques, researchers and breeders can develop horticultural crops with enhanced disease resistance, leading to improved crop yields, reduced dependence on chemical pesticides, and more sustainable agricultural practices. This Special Issue focuses on recent advances in NBTs to improve disease resistance in horticultural crops, inviting all types of articles, such as research papers and methods, reviews, and opinions.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
