

Occurrence, Fate and Behavior of Pesticides in Soil, Water and Air

Guest Editors:

Prof. Dr. Nikolaos S. Thomaidis

Laboratory of Analytical Chemistry, Department of Chemistry, University of Athens, Panepistimiopolis Zografou, 157 71 Athens, Greece

Dr. Niki Maragou

Benaki Phytopathological Institute, Department of Pesticides Control and Phytopharmacy, P.O. 145 61 Kifissia, Greece

Deadline for manuscript submissions:

closed (20 August 2021)

Message from the Guest Editors

Pesticides comprise a powerful tool in agriculture. However, the indiscriminate misuse of these chemicals raises a special concern regarding the levels that occur in the environment and the degree that their occurrence, in total, endangers the safety of our ecosystem. The pesticides' fate and behavior in the environment depends on several parameters. Simulation models are used to predict the environmental concentrations, which are subsequently used for the ecotoxicological risk assessment and eventually for the establishment of safe regulatory limits.

This Special Issue aims to solicit original contributions providing data on the occurrence of pesticides' residues in soil, sediment, groundwater, surface water, air and biota: 1) apply different fate models to the calculations or predict environmental concentrations; 2) the identification and quantification of pesticides and their (bio)transformation products in the relevant environmental compartments with high resolution analytical methods; 3) the use of monitoring data in the environmental risk assessment and the regulatory procedure for pesticides.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
