Message from the Guest Editor

In an era that promotes circular economy and sustainability, and considering the increasing demand for food and feed, it is of the utmost importance to assess and characterize potential feed sources providing protein in animal nutrition in order to mitigate environmental impact, improve economic efficiency, and to promote social sustainability and sustainable animal production.

Plant and animal by-products from the agriculture and food production chain, alternative crops, algae, insect meals, yeasts, fungi, and bacteria are some of the examples of sources that have been characterized. Some of the challenges in using alternative protein sources include imbalanced amino acid profile, the presence of antinutritional factors, health hazards, technical issues and high costs related with production and processing.

This Special Issue aims to provide new insights into the characterization of potential protein sources in animal nutrition and their effects on animal health, as well as environmental, economic and social sustainability in animal production.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
