### Message from the Guest Editor

In August 2019, the Intergovernmental Panel on Climate Change (IPCC) elaborated a special report on climate change, desertification, land degradation, sustainable land management, food security, and greenhouse gas fluxes in terrestrial ecosystems (<https://www.ipcc.ch/report/srccl/>). The executive summary of Chapter 5, focused on food security, affirms that climate change is already affecting food security, mainly due to increasing temperatures, changes in the precipitation patterns, and more frequent extreme environmental events being the future perspectives pessimistic for food security. Moreover, increasing atmospheric CO<sub>2</sub> can change plant stoichiometry, reduce the ratio between the nutritional and the caloric value of crops, and increase the micronutrient (zinc, copper or iron) malnutrition problem in the human diet. In addition, the impact of pests and diseases on food safety under scenarios of climate change should be taken into account due to the chemical and microbiological risks derived from the application of chemicals and from the accumulation of mycotoxins in the edible parts of crops.

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
