### Message from the Guest Editor

Dear Colleagues,

From the extensive use of agricultural machinery and the utilization of technologies like selective breeding and biofortification to the application of different agro-chemicals, all these practices directly affect the environment. Not only soil is affected, but indeed all environmental compartments, considering the fact that agro-chemicals are dispersed in the air and end up in different water bodies. Improvements in food production are necessary, but it is also important to be aware of their effects on the environment in order to be able to reduce the harmful consequences.

The focus of this Special Issue is on the effects of different agricultural practices on the environment. This broad topic involves the investigation of effects of mechanization, selective breeding and improvement of the nutritional content of crops, the application of mineral fertilizers and pesticides, and any other kind of agricultural practice on the affected biota. Studies from diverse research fields are welcomed, and both original research articles and reviews are accepted.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
