Message from the Guest Editors

Dear Colleagues,

The rapid increase in the world's population brings with it the necessity for food production intensification. Suitable soil and water management plays a crucial role in the success of sustainable agricultural production. Excess water in agro-areas escalates the risk of erosion and nutrient runoff with subsequent negative effects on crop yields. Therefore, development practices that can control water motion and soil aggregate stability is required for water retention, nutrient fixation, and generally maintaining a healthy soil system. These practices can also assist with the adaptation of agronomy to the impacts of climate change by avoiding huge oscillations between seasons of water abundance and drought.

As guest editors of this Special Issue of *Agriculture*, we would like to invite researchers and scientists to publish papers on advances in the various tools used for soil and water management in sustainable agriculture.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
