### Message from the Guest Editors

With the exponential increase in world population, food security has come under threat and enhancing food security without compromising its quality is required. Adding an additional constraint is the global warming issue that is causing continuous change in climate conditions, further threatening food security. Being sessile, a plant cannot move itself to a comfortable environment and has to face both biotic and abiotic stresses present in the environment. The expectation of ensuring food security at multiple levels includes the introduction of new technologies, genetic manipulation of relevant genes along with application of growth regulators in the agricultural sectors.

Phytohormones work together in a cascade of networks that affect each other's action and reaction. Phytohormones control plant growth and development through affecting plant metabolism. The emphasis is to increase growth and yield in plants to maintain the sustainability of both land and population depending on the land produce. In addition, it is necessary to promote research and dissemination of the obtained results in the farmer's field for proper use of growth regulators in agricultural output.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
