Message from the Guest Editors

Dear Colleagues,

This Special Issue explores the role of sensor technologies, e.g., machine vision, in transforming the livestock farming industry. This includes the advancements, challenges, and potential applications of sensor technologies in livestock farming. In addition, this Special Issue focuses on various aspects of sensor technologies, such as data processing and decision-making algorithms, showcasing their effectiveness in livestock management.

The articles will explore how sensor technologies can facilitate the automated monitoring of animal behaviour, disease detection, and identification of individual animals for tracking and sorting purposes. Furthermore, this issue also examines the integration of machine vision with other sensor technologies, such as infrared thermography and RFID, to enhance the overall efficiency and accuracy of data collection.

This Special Issue also addresses challenges associated with implementing sensor technologies in livestock farming, including data management, privacy, and cost-effectiveness.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
