Message from the Guest Editor

Dear Colleagues,

Considerable research has been done on conservation tillage systems under organic or regenerative practices. Much of the published research has focused on field studies located in Europe and the USA. This important work has continued and been expanded to include efforts on other continents and in different countries as well. It is appropriate and timely to publish a Special Issue in *Agriculture*, which highlights the progress made in developing strategies for the successful adoption of conservation tillage practices by organic farming researchers and farmers. I invite those working in this area to submit manuscripts summarizing results of this research for this Special Issue.
