Message from the Guest Editor

Solving the contradiction between the rapidly developing pig industry and the increasingly scarce food resources is one of the most imperative challenges of modern agriculture. At present, alternative products of traditional corn-soybean meal feed such as wheat, brown rice, and yeast protein, etc. have been put on the agenda. However, a better understanding of how to eliminate the high fiber content and certain anti-nutritional factors in these products is critical to realize their feeding potential.

This Special Issue focuses on improving the nutritional utilization of swine alternative feed ingredients, such as the development of methods to eliminate anti-nutritional factors in swine feed alternative products, and the use of a certain additive to increase the digestion of nutrients. These articles mainly cover areas such as the effects of physical processed, chemically processed, and biological fermented feed products in pigs. All types of articles, such as original research, opinions, and reviews are welcome

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
