

Breeding, Genetics, and Genomics of Fruit Crops

Guest Editor:

Prof. Dr. Gaetano Distefano

Department of Agriculture, Food and Environment, University of Catania, Via Valdisavoia 5, 95123 Catania, Italy

Deadline for manuscript submissions:

closed (10 April 2023)

Message from the Guest Editor

The fruit tree crop field is experiencing radical changes thanks to both technical and genetic innovations that are contributing to the production of fruits with improved characteristics. The global demand for fruit tree crops with such improved agronomical and fruit quality traits is increasing rapidly every year. However, genetic improvement by traditional breeding is slow and unpredictable due to the long juvenile phase, high degree of heterozygosity, and polygenic regulation of most agronomical traits. Traditional breeding increases its efficiency when supported by genetic and molecular information using marker-assisted selection (MAS). Advances in DNA-derived data and innovative phenotyping are bridging the genotype-to-phenotype gap in fruit tree crop selection. Developing new genomic-based tools using next-generation sequencing (NGS), high-throughput genotyping technologies, and new breeding techniques (NBT) has expedited the chance for achieving important improved traits.

This Special Issue welcomes innovative research focusing on the molecular markers helping breeders toward the definition of novel ideotypes characterized by superior agronomical traits.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
