

Advanced Research of Soil Microbial Functional Diversity

Guest Editor:

Dr. Cristina Abbate

Department of Agriculture Food
and Environment, University of
Catania, Catania, Italy

Deadline for manuscript
submissions:

closed (20 November 2022)

Message from the Guest Editor

Soil microorganisms are essential drivers of nutrient turnover in terrestrial ecosystems, being involved in numerous key soil processes, including formation and decomposition of organic matter, respiration, plant nutrition, and health.

Research on soil microorganisms has become a crucial topic in ecology and functional diversity is the essential link between biodiversity patterns and ecosystem functioning. Soil microbial communities are responsible for energy and nutrient cycling and are massively involved in the planet's sustainability. Soil microorganisms are not only affected by ground vegetation but also react to vegetation through its own changes, forming an interactive feedback system with vegetation. Compared with the physicochemical properties of soil, soil microbial characteristics are sensitive even to small fluctuations in the environment and change very fast.

Microbial functional diversity is an important index to evaluate soil process and ecological function, and its definition and quantification have practical and theoretical implications.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
