Message from the Guest Editors

Meat is the most valuable source of highly digestible nutrients for people, and sustainable livestock production is the clue to sustainable food production. However, livestock housing systems have different potential when it comes to being sustainable and to offering animals a high level of welfare. Both the environmental conditions on the farm and the welfare of livestock will affect the performance of animals reared for meat, as well as the intrinsic meat quality attributes. Outdoor housing is related to increased exercise and a specific diet, in most cases with certain breeds or breed crosses. These kinds of housing systems have greater potential to produce high-quality meat, usually characterized by specific flavor and aroma. Some indoor systems also have the potential to offer a high level of welfare. However, aside from the influence of deep-bedded housing on fattening performance, the effect on the quality of meat has not been proven.

This Special Issue focuses on alternative, extensive animal husbandry practices that allow for the production of high-quality meat while maintaining high welfare standards and being in balance with the environment.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
