Message from the Guest Editor

The impacts of climate change are already being experienced around the world, and predictions indicate that the frequency of droughts and extreme high temperatures will increase. These abiotic stresses are impacting vegetable crop productivity and yield. Improving existing cultivars and breeding new ones with enhanced abiotic stress tolerance traits is critical to prevent further yield losses and produce crops that are well-adapted to climate change. Therefore, it is important to identify significant traits of interest associated with abiotic stress tolerance and increase the depth and breadth of molecular and physiological information available. However, vegetable crops frequently have narrow genetic diversity for abiotic stress tolerance traits due to intense selection for yield and quality traits at optimum growing conditions. Moreover, these stress tolerance characteristics are often complex polygenic traits. Additionally, there is a need for new, affordable, and rapid trait identification and phenotyping methods. This collection of articles will provide new solutions and add to the knowledge base for the development of vegetable crops adapted to abiotic stress.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
