Message from the Guest Editor

The main objective of this Special Issue is the publication of original research and review papers addressing topics on 'Advanced Research in Viticulture and Grapevine Physiology' that optimize vineyard management to reduce external inputs, increase canopy water use efficiency and explore the grapevine biodiversity as a reservoir of variability that is able to better adapt to biotic and abiotic stresses, including new canopy management techniques that are able to increase table grape and wine grape quality. In order to contrast the negative effects of climate change, the correct choice of new rootstocks, the innovative training system, the effect of row orientation, the introduction of new plastic film or photo selective nets to advance, delay or modify the light and temperature canopy conditions must be considered. It is a priority to explore the effects of climate change on vine physiology to understand the vine adaptation to new microclimate conditions, in particular, in relation to the shift of viticulture in new growing areas.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
