Entomopathogens and Their Application in Pest Biological Control

Message from the Guest Editor

The demand for pesticide-residue-free food, environmental pollution, and regulations on the use of agrochemicals have increased the importance of biological pest control in agriculture, particularly regarding the use of microorganisms such as bacteria, fungi, nematodes, viruses, and protozoa. The development of research projects in this field, mainly focused on virulent strains, molecular identification of new species, sites of action, and formulation and field application, makes it essential to create spaces for their publication and discussion. The future of healthy food production largely depends on the proper use of these microorganisms in the field. In this regard, the aim of this Special Issue is to publish information primarily on the following topics:

- Reports on new strains of invasive species.
- Molecular identification of entomopathogenic species.
- Formulation and field application of microorganisms.

We welcome all types of articles, including original research, opinions, and reviews.

About the Journal

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, scholarly and scientific open access journal publishing peer-reviewed research papers, review articles, communications and short notes that reflect the breadth and interdisciplinarity of agriculture.

Editor-in-Chief

Prof. Dr. Les Copeland
Sydney Institute of Agriculture, School of Life and Environmental
Sciences, The University of Sydney, Sydney, NSW 2006, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Plant Science)
