Message from the Guest Editor

Dear Colleagues,

Biofertilizers are the basic source of nutrients for sustainable and ecological agriculture, which is why this Special Issue will be devoted to them.

Biofertilizers are substances containing various microorganisms that have the ability to increase the uptake of nutrients by plants by colonizing the rhizosphere and facilitating the absorption of nutrients. Biofertilizers are an effective and economically viable alternative to mineral fertilisers. In recent years, one of the very important goals of modern agriculture, especially organic farming, has been to maintain the health of soils, e.g., through the selection of appropriate fertilisation methods. Therefore, interest in the bioproducts market is growing dynamically, which makes it necessary to implement new biofertilizers, including microbiological products, into agricultural practice. We invite authors to submit papers on various types of biofertilizers and the mechanisms by which they activate their function of increasing yields in order to mitigate climate changes, increase crop production, and meet food needs.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Plant Sciences) / CiteScore - Q1 (Agronomy and Crop Science)
